Alphalete Trenchless SEO Baseline Report

Baseline date: July 22, 2026 | Domain: alphaletetrenchless.com | Prepared by TAG Marketing

Purpose

This document locks in the measured state of alphaletetrenchless.com as of **July 22, 2026**. Every figure below was pulled from live data sources on this date. All future SEO progress should be reported as a delta against these numbers rather than in general terms.

Sources: Search Atlas (OTTO project, Site Audit #144030, Site Explorer, Rank Tracker, Google Business Profile) and Google Search Console property https://alphaletetrenchless.com/. Sitemap and on-page findings were independently verified by crawling all 134 live sitemap URLs directly.

Headline Scores

OVERALL	TECHNICAL	CONTENT	AUTHORITY	UX SIGNALS
40	93	30	2	36

Search Atlas holistic scores, refreshed 2026-07-20. Scale 0-100.

The One-Paragraph Summary

Technical SEO is effectively complete at 93/100 and the OTTO noindex blocker that dominated the last month is now confirmed resolved. Despite that, the site earned only **47 real US clicks in 90 days**, and all 42 local service pages produced **zero impressions**. The two things actually gating growth are **authority** (2/100, with a backlink profile made up entirely of PBN and Fiverr spam) and **local page uniqueness** (city pages are still roughly 95% identical to each other). Google Business Profile is the cheapest untapped win: 16 five-star reviews sit unanswered and zero citations have been built.

Status of Prior Workstreams

Workstream	Status	Evidence at baseline
OTTO / MetaSync noindex blocker	**RESOLVED**	All 134 sitemap URLs crawled: 134 x HTTP 200, 0 serving noindex, all canonicals self-referential
Blog URL move to /blog/	**RESOLVED**	Root blog URLs 301 correctly to /blog/; no redirect chains found
Technical SEO / site speed	**DONE**	Technical pillar 93/100
Titles & meta descriptions	**DONE**	OTTO: 32/32 title tags and 32/32 meta descriptions deployed
Image alt text	**DONE**	OTTO: 58/58 deployed
Local page uniqueness rewrite	**OPEN**	42 pages still near-duplicate; 0 impressions across all of them
Link building / authority	**NOT STARTED**	0 legitimate referring domains
Google Business Profile	**NEGLECTED**	52% complete, 0 of 16 reviews replied, 0 citations

1. Organic Performance (Google Search Console)

Reporting window: April 22, 2026 through July 20, 2026 (90 days).

Metric	All traffic	United States only
Clicks	**74**	**47**
Impressions	7,693	7,465
CTR	0.96%	0.63%
Average position	18.4	30.9

Of the 74 total clicks, **24 originated from the Philippines**, which is internal team testing rather than customer demand. The honest number for real market performance is **47 US clicks in 90 days**.

Device split

Device	Clicks	Impressions	Avg position
Desktop	50	5,459	32.5
Mobile	24	2,506	24.2
Tablet	0	51	42.0

Where the impressions actually come from

Every meaningful impression is earned by blog content. Not one commercial or local page is contributing.

Top pages by impressions	Impressions	Clicks	Avg position
/what-is-trenchless-sewer-repair/	1,184	0	51
/hydro-jetting-colorado-springs/	733	0	14
/sewer-line-repair-without-digging/	508	0	36
/ (homepage)	469	1	35
/cracked-vs-collapsed-sewer-pipe/	325	0	31
/trenchless-vs-traditional-sewer-repair/	317	0	72
/basement-floor-drain-backing-up/	312	0	41
/hydro-jetting-cost-colorado-springs/	273	0	24
/service-areas/	14	0	37
All 42 local service / city pages combined	**0**	**0**	n/a

2. Keyword Rankings (Search Atlas Rank Tracker)

14 keywords tracked. **12 of the 14 do not rank at all.**

Keyword	Position	Ranking URL
alphalete trenchless (branded)	**1**	alphaletetrenchless.com/
hydro-jetting cost near me	**28**	/hydro-jetting-cost-colorado-springs/
trenchless sewer repair	Not ranking	-
sewer line repair	Not ranking	-
trenchless pipelining	Not ranking	-
no dig pipe repair	Not ranking	-
no dig sewer repair	Not ranking	-
pipe lining	Not ranking	-
pipe relining	Not ranking	-
sewer pipe repair	Not ranking	-

Two issues with the tracker itself: it points at a stale pre-move URL (/hydro-jetting-cost-colorado-springs/ rather than the /blog/ version), and 14 keywords is too thin to manage a 42-page local footprint.

3. Authority and Backlinks

Score: 2 out of 100. This is the single hardest ceiling on the account.

Metric	Value
Domain power	3
Total backlinks	26
Referring domains	20
Legitimate referring domains	**0**

The profile is entirely spam

The anchor text alone shows what the links are. These are not editorial mentions, they are the residue of a cheap link package:

- “high quality dofollow backlinks da 50 pa 40 premium pbn network service alphaletetrenchless.com rank first page google fast seo link building buy backlinks online cheap” — **7 links**
- “thanks to fiverr seo tactics, my alphaletetrenchless.com’s click-through rates increased by over 80%” — 1 link
- “visit site seo alphaletetrenchless.com premium backlinks” — 1 link
- “alphaletetrenchless.com” (bare URL) — 15 links

Representative referring domains: fiverr-cost-effective-seo.site, royaldb.us.com, websites.freemyip.com, byteshort.xyz, reports.webredirect.org, directorylinkservice.com, nivira.shop, quero.party. Highest domain authority in the entire profile is 21.

Implication: no amount of additional on-page or content work will move competitive rankings while authority sits at 2. This requires a genuine acquisition plan (local suppliers, Colorado trade associations, chamber memberships, HOA and property-manager partners, digital PR) plus a disavow review of the PBN cluster.

4. Local Page Duplication

42 local service pages are live and indexable. They remain near-identical templates. A direct body-text comparison of two of them, `sewer-camera-inspections-in-simla` and `sewer-camera-inspections-in-matheson`, found them **approximately 95% identical** once the city name is removed. Word counts across each group cluster within about 200 words of one another, which is the signature of an unmodified template clone.

Page group	Live pages	Impressions (90d)
/services/sewer-camera-inspections-in-*	9	0
/service-areas/hydro-jetting-services-in-*	9	0
/service-areas/drain-cleaning-services-in-*	9	0
/services/commercial-trenchless-pipelining-*	9	0
/service-areas/trenchless-sewer-repair-*	7	0
Total	**43**	**0**

Open strategic question: the 12 Commercial metro pages were already rewritten with unique local proof and they are still at zero impressions. Meanwhile many of the remaining targets are very small towns (Simla, Matheson, Guffey, Yoder, Ramah, Boone) where a perfect page would still face near-zero search volume. Before rewriting nine more of these, the decision to make is whether to **consolidate into fewer real-metro pages** rather than continuing to expand the footprint.

5. Google Business Profile

Location: Alphalete Trenchless Sewer & Drain Rehabilitation, Colorado Springs. Primary category: Plumber.

Metric	Current	Comment
Reviews	16	Strong 4.94 average rating
Reviews replied to	**0 of 16**	All 16 sitting unanswered
Profile completeness	52.4%	Missing attributes, categories, descriptions
GBP score	58	Search Atlas composite
Citations built	**0**	No directory footprint at all
Average map rank	19	Outside the local pack
Published posts	6	Post automation currently disabled

Eight open profile tasks

Task	Issue
Add attributes	attributes = missing
Add additional category	secondary_category = missing
Add service descriptions	services._description = missing
Add action links	url_appointment = missing
Add social media profile	social_media_url = missing
Add opening date	opening_date = missing
Enable automated posting	posts.automation = disabled
Enable automated review reply	reviews.automation = disabled

For a service-area business this is where leads actually originate, and it is currently the least-worked asset in the account. It is also the fastest to fix.

6. Technical and Crawl Findings

Search Atlas Site Audit #144030 crawled 251 URLs and logged 3,017 issues. The overall technical pillar remains healthy at 93/100; the items below are cleanup, not blockers.

Finding	Count	Priority
Internal links that redirect	195	Medium
Images not in a modern format (WebP/AVIF)	196	Low
Images larger than 100 KB	104	Low
Images in non-standard formats	113	Low
Skipped heading levels	146	Low
Pages with multiple H1 headings	29	Medium
Pages with a large DOM (>1000 elements)	141	Low
JavaScript files over 300 KB	35	Medium
Non-indexable pages included in the sitemap	45	Medium
Important pages missing from the sitemap	4	Medium
Sitemap URLs that 301-redirect	**6**	**High**

The six redirecting sitemap URLs

Rank Math is publishing slugs that no longer resolve directly. These should be removed from the sitemap so crawl budget goes to the destination pages:

- `/blog/signs-cast-iron-pipes-failing-colorado-springs/`
- `/blog/cracked-vs-collapsed-sewer-pipe-explained/`
- `/blog/gurgling-drains-sewer-smells-causes/`
- `/blog/recurring-sewer-line-backups/`
- `/blog/is-hydro-jetting-safe-for-cast-iron-pipes/`
- `/blog/commercial-trenchless-pipelining-colorado-springs/`

Sitemap composition

Section	URLs
Blog posts	75
/service-areas/	26
/services/	25
Core pages (home, about, contact, careers, legal)	8
Total	**134**

7. OTTO Deployment Status

425 issues found, **183 deployed, 242 still pending**. OTTO SEO score 83.

Category	Total	Deployed	Pending	Status
Title tags	32	32	0	Complete
Meta descriptions	32	32	0	Complete
Image alt texts	58	58	0	Complete
Heading optimizations	7	7	0	Complete
Canonical links	3	3	0	Complete
Topical maps	5	5	0	Complete
Schema markup	86	0	**86**	Pending
Twitter cards	51	0	**51**	Pending
Semantic analysis / knowledge graph	44	0	**44**	Pending
Knowledge-based trust	30	0	**30**	Pending
Headings length	27	20	7	74%
Meta keywords	32	23	9	72%
Internal linking	7	0	7	Pending
Open Graph	4	0	4	Pending

Important caveat. The remaining pending on-page items for headings, meta keywords, Open Graph and internal linking are almost entirely on low-value URLs: `/author/kim/`, `/author/scott-vincent/page/2/`, `/blog/page/7/` and `/privacy-policy/`. Those pages should be **noindexed, not optimized**. Do not spend effort clearing that queue. The genuinely valuable pending work is schema markup, semantic analysis and knowledge-based trust.

8. Recommended Sequencing From This Baseline

#	Action	Why now	Effort
1	**Reply to all 16 GBP reviews and complete the profile**	Fastest path to real leads; 8 open tasks; 0 citations built	Low
2	**Build local citations**	Zero directory footprint; directly feeds map-pack prominence	Low
3	**Start a genuine link acquisition plan**	Authority 2/100 is the hard ceiling on everything else	High
4	**Disavow review of the PBN cluster**	Anchor text is overtly spam and may be actively harmful	Medium
5	**Decide consolidate vs. rewrite for local pages**	Do not rewrite nine more tiny-town pages before this call is made	Decision
6	Deploy OTTO schema markup (86 items)	Real value; supports AI search visibility	Low
7	Remove the 6 redirecting URLs from the sitemap	Quick crawl-budget cleanup	Low
8	Expand rank tracking beyond 14 keywords; repoint stale URL	Cannot measure a 42-page footprint with 14 terms	Low

---

How to use this baseline. *When reporting progress in future sessions, quote the figure from this document alongside the new figure. For example: "US clicks 47 → 112 since the 7/22 baseline" or "referring domains 0 legitimate → 6 legitimate since the 7/22 baseline." Vague claims of improvement should not be accepted without a number from this page.*
