Pipeliners USA — Full SEO Baseline

pipelinersusa.com | Baseline date: **July 22, 2026** | Read-only audit across every Search Atlas module — OTTO, Site Audit, Site Explorer, Rank Tracker, Google Business Profile, Citations, LLM Visibility, Local Heatmaps. No changes were made. | Prepared by TAG Marketing

Executive Summary

The site is healthier than a single-metric read suggests — 428 keywords ranking, ~927 estimated monthly visits, and traffic trending up three months running. But almost all of that traffic is the brand name, and **commercial-intent traffic is zero**. The content engine is producing informational articles that rank and do not convert, while the technical layer keeps 59% of ranked keywords parked below position 50.

The single most important finding

Of 289 classified keywords, only **14 are transactional — and they drive 0 traffic**. Meanwhile **800 of the 927 total visits come from one term: "pipeliners"**, the company's own name. Real non-brand discovery traffic is roughly **127 visits per month** against 50+ published posts. This is a content-strategy problem, not a technical one, and no amount of crawl fixing will solve it.

Metric	Value	Read
Keywords ranking (Site Explorer)	**428**	**Healthy**
Est. monthly organic traffic	**927** (May 652 → Jun 912 → Jul 927)	**Rising**
Non-brand traffic	~**127** / month	**Critical**
Transactional-intent traffic	**0**	**Critical**
Keywords in top 10	8 of 428 (1.9%)	**Poor**
Keywords at position 51–100	**253** (59.1%)	**Upside pool**
OTTO SEO score	**78** / 100	**Fair**
OTTO issues found / deployed / pending	4,733 / 2,268 / **2,465**	**52% deployed**
Crawl status 2xx / 3xx / 4xx	141 / **64** / **24**	**Poor**
Backlinks / referring domains	1,147 / 312	**Mostly junk**
GBP completeness / reviews	**95.24%** | **122** @ **4.99**, 100% replied	**Excellent**
Local pack coverage	17 of 180 SERPs (**9.4%**)	**Poor**
AI share of voice	**32%** — rank #1	**Leading**
Core Web Vitals	Failing (LCP + FCP)	**Poor**

1. Organic Footprint

> **Reading the rank tracker in isolation is misleading**
>
> The rank tracker shows only **1 of 20 keywords in the top 100** (*sewer pipe lining cost* at #62). That figure is accurate but incomplete — those 20 are national head terms the site was never positioned for. Site Explorer shows the site ranking **#1** for *sewer line repair in mesa az*, *sewer line replacement mesa*, *drain line repair mesa*, *pipe repair mesa az*, *trenchless sewer repairs gilbert*, and *sewer reline arizona*. **Local long-tail works; national head terms do not.** Judge performance on the former.

Search intent breakdown (289 classified keywords)

Intent	Keywords	Traffic
Informational	252	11
Navigational (brand)	23	826
Transactional	**14**	**0**

Position distribution (428 keywords)

Position range	Keywords	Share
1–3	2	0.5%
4–10	6	1.4%
11–20	20	4.7%
21–50	117	27.3%
51–100	**253**	**59.1%**
100+	30	7.0%

Only eight keywords sit in the top ten. The 253 parked between 51 and 100 are ranked but invisible — this is the pool the crawl-health fixes in section 4 should lift.

Competitors sharing the keyword set

Domain	Shared keywords	Traffic
peerlessplumbingrepipes.com	9	**3,798**
theplumberaz.com	8	1,631
nuflowphoenix.com	**20**	1,309
arizonadraincleaning.com	4	302
arizonatrenchless.com	5	224
desertdrain.com	3	156

2. Backlink Profile — inflated by junk

1,147 backlinks across 312 referring domains reads as a strength. The composition does not support that. The top referrers are auto-generated statistics and directory spam at domain authority 2–3:

- **Auto-generated stat / directory spam** — wants.cfd, indians.cc, takes.sbs, knows.monster, way2check.cv, bestwebstats.com, getwebsiteworth.com, domainsc.com, linksnatcher.com, websiterace.com, domainanalysis.org (9–13 links each, DA 2–3)
- **gridinsoft.com** virus-scanner result pages across five language subdomains
- **doubkeckicka.blogspot.com** — 20 links, DA 2
- **onservicesllc.com** — 33 links from a single DA 14 site, almost certainly a sitewide footer placement

Genuine editorial links are thin: Yellowpages, Birdeye, one syndicated press release, and a couple of contractor sites. **Do not quote 312 referring domains to the client as a strength.**

3. Indexing Anomalies

Finding	Detail	Severity
403 returned to third-party crawlers on 7 indexed URLs **including the homepage** (906 backlinks, 261 referring domains). A direct scrape succeeds at 338KB, so this is WAF/CDN bot-filtering, not an outage.	**Unverified:** whether GPTBot / PerplexityBot / ClaudeBot hit the same filter. If they do, it directly suppresses AI citation.	**Investigate**
GoHighLevel widget URLs indexed	link.pipelinersusa.com/widget/form/... and /widget/booking/... returning 200	**High**
Elementor template URLs 404ing with live backlinks	?elementskit_template=header, ?elementskit_template=header-2-landing	**Medium**
Orphan pages	5 pages with 200 status and no internal links	**Medium**

4. Open Technical Fixes

From site audit 41385 (229 pages crawled, 2,678 issues). Listed in the order they should be worked — each gates the ones below it.

#	Issue	Evidence	Severity
1	**Search Atlas GSC reads blocked.** 403 “GSC is not enabled for the selected country”. Blocks all index-status and performance reporting until the country is activated in project GSC settings.	403 on every GSC call	**Blocker**
2	**Sitemap still wrong.** Non-indexable pages included, real pages missing. Unresolved root cause behind the standing not-indexed backlog.	15 non-indexable included; 5 pages missing	**Critical**
3	**Redirect drag.** Internal links pointing at redirects waste crawl budget and leak PageRank before it reaches the destination.	176 redirecting internal links; 64 pages 3xx	**Critical**
4	**Pages returning 4xx.** Consistent with the media migration that left old pages pointing at dead upload paths.	24 pages 4xx; 1 broken external link	**High**
5	**Duplicate city pages remain.** De-dup partially complete — Tempe done, roughly five city pages still mirror each other.	6 non-unique titles, 6 non-unique H1s, 2 non-unique bodies	**High**
6	**Images unoptimized at the server layer.** Cause is LiteSpeed image optimization switched off, not the source files. JS Minify must stay OFF — it breaks the footer.	200 not WebP/AVIF; 118 over 100KB; 60 missing alt	**High**
7	**Core Web Vitals failing** on LCP and FCP, driven by DOM weight and JavaScript payload.	126 pages over 1,000 DOM nodes; 109 over 300KB JS	**High**
8	**Structural markup gaps.** Missing schema types plus heading hierarchy problems across the Elementor templates.	111 pages missing schema; 13 multi-H1; 46 skipped heading levels	**Medium**

5. OTTO Optimization Backlog (2,465 pending)

Item	Pending	Total	Deployed
Knowledge-Based Trust / factual enhancement	**420**	450	**7%**
Semantic analysis / knowledge graph	**371**	470	**21%**
Issues with links	**535**	658	**19%**
Schema markup	**257**	337	**24%**
Twitter Card	242	342	**29%**
Missing keywords	137	1,122	**88%**
Image alt texts	91	217	**58%**
Open Graph	89	185	**52%**
Headings length	83	171	**51%**
Meta descriptions	65	135	**52%**
Title tags	60	135	**56%**
Meta keywords	49	135	**64%**
Internal linking opportunities	56	156	**64%**
Dynamic indexing	10	132	**92%**
Heading optimizations	0	73	**Complete**
Canonical links	0	5	**Complete**
Topical maps & supplemental content	0	10	**Complete**

6. Local Presence — Google Business Profile

The GBP is the strongest asset in the account and should be protected as such.

Metric	Value	Read
Verified	Yes — open, no pending sync	**Good**
Profile completeness	**95.24%**	**Good**
Reviews	**122** @ **4.99** — 121 five-star, 1 four-star	**Excellent**
Reply rate	**100%** — 0 unreplied	**Excellent**
Categories	Plumber (primary), Drainage service	**Thin**
Heatmap average position	**3** across 4 tracked keywords	**Good**
Local pack coverage	17 of 180 SERPs (**9.4%**)	**Poor**
Citations	One campaign only (id 5860, Mesa AZ) — status Finished, none ongoing	**Stalled**

Two GBP problems worth fixing

Only two categories for a trenchless specialist is thin — the profile does not signal CIPP, pipe lining, or sewer inspection. And the **profile website URL is http://pipelinersusa.com/?utm_source=google&utm_medium=gmb&... — http rather than https, and it 301-redirects.** That redirecting URL is the single highest-traffic “page” in Site Explorer at 893 visits. Every one of those visits lands on a redirect before reaching the site.

The mismatch between an average heatmap position of 3 and 9.4% local pack coverage means the profile's strength is proximity-bound. It ranks well near the Mesa address and does not carry across the wider service area.

7. AI Search Visibility

Pipeliners currently leads its competitive set in AI answer engines, with 32% share of voice and 92 mentions. Overall visibility score 32.4, sentiment 63.3. The lead is real but the platform distribution is badly uneven.

Platform	Visibility	Read
ChatGPT	**80**	**Strong**
Perplexity	**60**	**Good**
Gemini	20	**Weak**
Copilot	**0**	**Absent**
Google AI Mode	**0**	**Absent**

Zero presence in Google AI Mode is the commercially significant gap.

Share of voice vs competitors

Domain	Mentions	Share of voice
pipelinersusa.com	**92**	**32%**
whyrepipe.com	79	22%
nuflow.com	63	23%
uspipelining.com	42	24%
aceduraflo.com	42	18%
reddit.com	40	18%
youtube.com	39	16%

Topic-level visibility

Topic	Visibility	Rank	Volume
ePIPE Water Line Coating	**58**	2	2,180
Trenchless Drain Lining	33	2	1,950
Residential Pipe Restoration	27	3	1,850
Commercial Pipe Rehabilitation	26	3	4,400
CIPP Pipe Restoration	**16**	2	2,600

CIPP Pipe Restoration is the weak point — lowest visibility at 16 and lowest sentiment at 48, against 2,600 monthly volume. uspipelining, nuflow and pipelinerpros own that conversation. CIPP is a core Pipeliners service, so this is a gap worth closing.

Monitoring gap: neither Pipeliners LLM-visibility project is set to user-tracked. Alphalete and Summit both have tracked projects, so Pipeliners AI visibility is not being measured on a schedule.

8. Recommended Work Order

Phase 1 — Unblock measurement and crawl health

- Activate the country in Search Atlas GSC settings — restores index-status reporting.
- Rebuild the sitemap: drop the 15 non-indexable URLs, add the 5 missing pages.
- Repoint the 176 internal links currently passing through redirects.
- Audit and resolve the 24 pages returning 4xx.
- Test whether AI crawlers (GPTBot, PerplexityBot, ClaudeBot) are caught by the same bot-filter returning 403 to third-party crawlers.

Phase 2 — Fix what converts

- **Address the transactional-content gap.** Zero commercial-intent traffic against 50+ informational posts is the largest single finding in this audit.
- Correct the GBP website URL to https and drop the redirect.
- Add categories to the GBP covering CIPP, pipe lining and sewer inspection.
- Finish the remaining five duplicate city pages.
- Deindex the GoHighLevel widget URLs on link.pipelinersusa.com.

Phase 3 — Speed, authority and AI

- Enable LiteSpeed image optimization and WebP delivery. Leave JS Minify off.
- Reduce DOM size and JavaScript payload on the heaviest Elementor templates.
- Build genuine editorial links — the current profile is inflated by directory spam.
- Close the CIPP content gap and set the Pipeliners LLM-visibility project to user-tracked.
- Then work the OTTO queue: schema (257), semantic and Knowledge-Based Trust (791 combined), titles and metas (125).

9. Reference IDs

Asset	Identifier
OTTO project UUID	`ca42c443-7cfb-4051-91d3-509546438613`
OTTO numeric project id	9905
Site audit id	41385
Site Explorer site id	233578
Rank tracker project id	34164 (20 keywords)
GBP location id	7809 — Pipeliners, Mesa AZ
Local heatmap business id	102642
Citation campaign	5860 — Mesa AZ — Finished
LLM visibility projects	`e3c7ba8e-c726-43d6-bb1f-45654990fe61`, `9f955ea6-c6e8-467b-b044-0bc4ebc5cc2d`
GSC property	`sc-domain:pipelinersusa.com`

Baseline captured 2026-07-22 from Search Atlas. Read-only — no changes were made to the site, the OTTO queue, or any connected property. Rankings and crawl data are point-in-time; re-run the site audit before comparing against a future measurement. **Two gaps in this baseline:** Google Search Console figures are unavailable because the Search Atlas GSC connection returns a 403 (technical fix #1), and the full GBP audit report plus per-grid heatmap breakdown could not be retrieved — those endpoints returned transient internal errors and are worth retrying.
