PIPELINERS SEO TUTORIAL

How to Use Low-Hanging Fruit Keywords

A step-by-step picture guide: how to find keywords Google already shows us for, and how to move them from page 2 or 3 up to page 1, without guessing.

What "low-hanging fruit" means

A search Google **already** shows one of our pages for, again and again, just not high enough to get clicks. The page is close. A few small, focused fixes can push it up.

1 – 7	8 – 30	31+
Top of page 1. Already winning. Protect it.	**The low-hanging fruit zone.** Close enough to push up.	Too far for a quick fix. Needs bigger work.

Numbers are Google's average position. Page 1 = positions 1 to 10, page 2 = 11 to 20, page 3 = 21 to 30.

The 6 steps

1 Confirm it's real
2 Match the right page
3 Put the keyword where Google reads first
4 Add what's missing
5 Link to it
6 Tell Google, then wait

You need

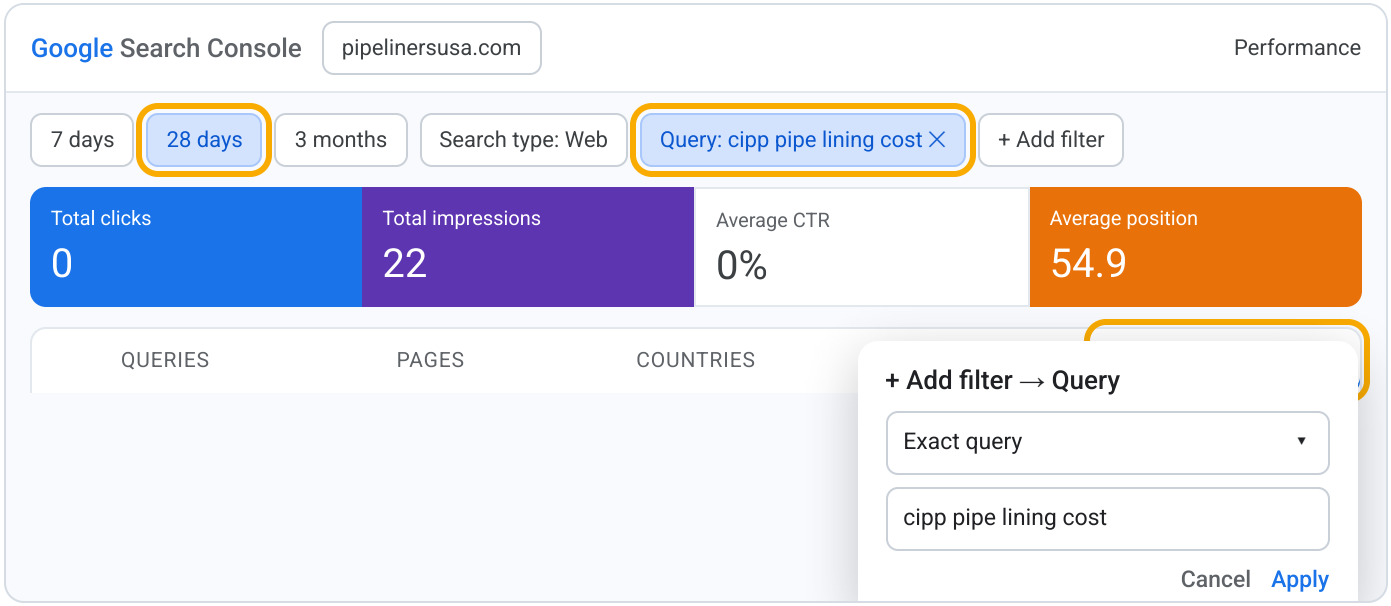

Search Console access (pipelinersusa.com Domain property), the page in WordPress, and 30 minutes per keyword.

House rules

No prices or unverified claims. "Pipeliners", not "Pipeliners USA". No em dashes. Never touch the homepage, phone numbers or Google Ads pages.

1 Confirm it's real

Before changing anything, check that Google shows us for this search **regularly**.
One lucky day is not a ranking.

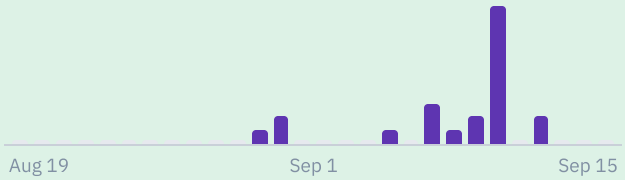

1 In Search Console, open **Performance** and pick **28 days**.

2 Click **+ Add filter → Query**. Choose **Exact query**, type the keyword, and click **Apply**.

3 Open the **Days** tab. Count how many different days it shows up.

PASS

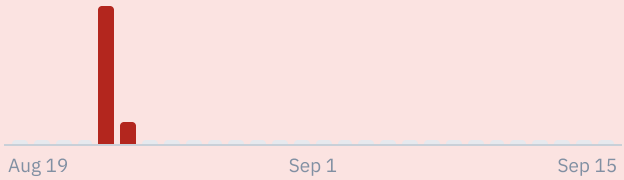

"cipp pipe lining cost"

22 impressions on **8 different days**. Google keeps showing it. **Real.**

FAIL

"main line clog phoenix"

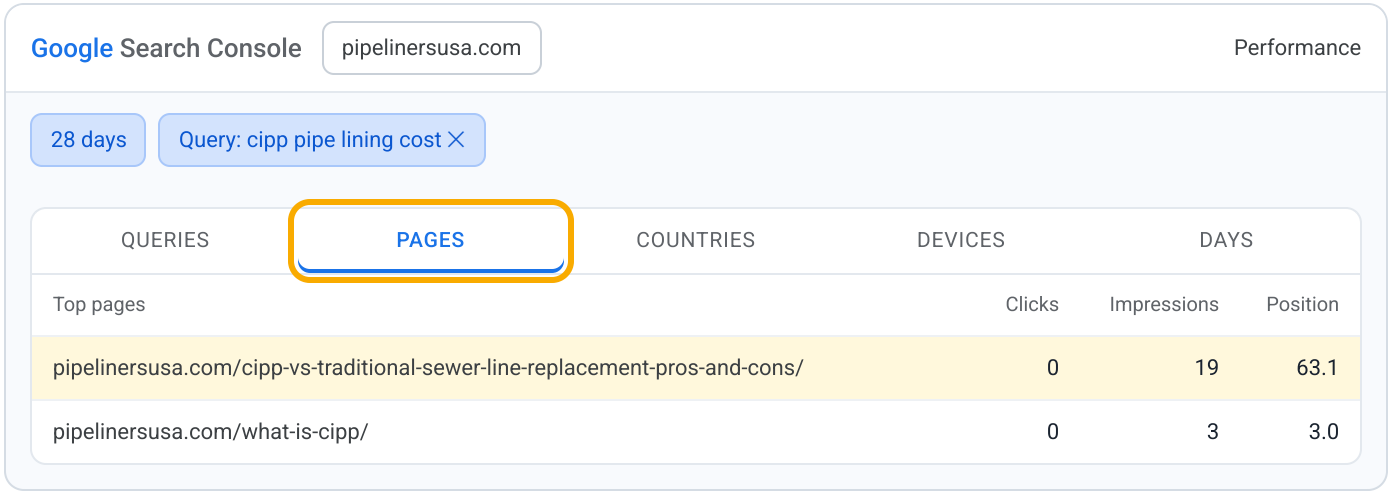

7 impressions, but **6 on one day** (Aug 23), then nothing for 3 weeks. **A burst, not a ranking.**

It's real when all 3 are true

- Seen **3+ times** on **2+ different days** (more days is better).
- Average position between **8 and 30**.
- **One page** gets it, or one page clearly gets most of it (check the **Pages** tab, next step).

2 Match it to the right page

Pick the page Google **already** shows for the keyword. Don't create a new page for the same keyword; that splits Google's attention.

1 Keep the same query filter and open the **Pages** tab.

2 The page with the **most impressions** is usually the one Google prefers.

3 If two pages split it, pick **one** and give the other a different job.

WHAT THIS EXAMPLE TELLS US

"cipp pipe lining cost" is split: the CIPP vs Traditional post gets 19 impressions at position **63** (too far down), and What is CIPP gets 3 at position 3, but only on Aug 30 and 31. It's a real search, but **not low-hanging fruit yet**, and it's a cost topic, so the wording needs Scott's OK first.

Does the page really answer it?

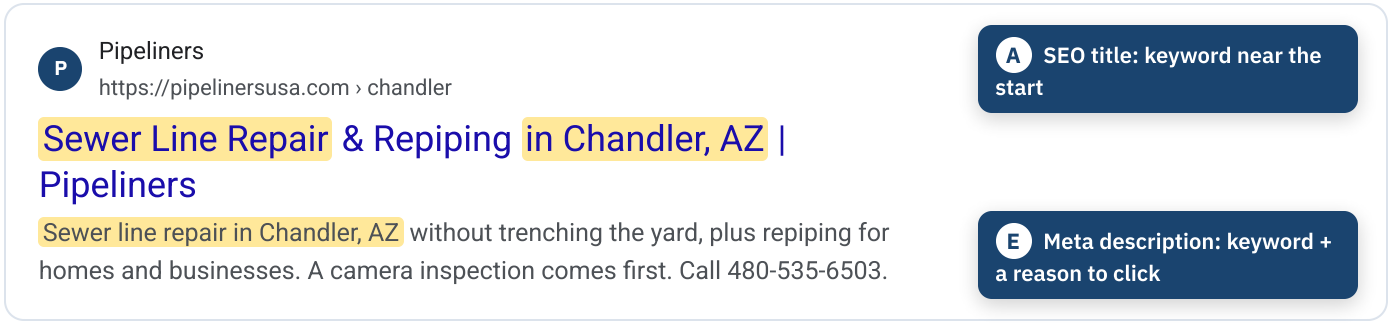

- A **cost** search needs a cost answer (what drives the price, no prices).
- A **Phoenix / Mesa** search needs local detail, usually on the city page.
- A **"how to" / "what is"** search needs a clear explanation, usually a blog post.
- A **"near me" / "company"** search needs a service page with a clear call to action.

Stop if...

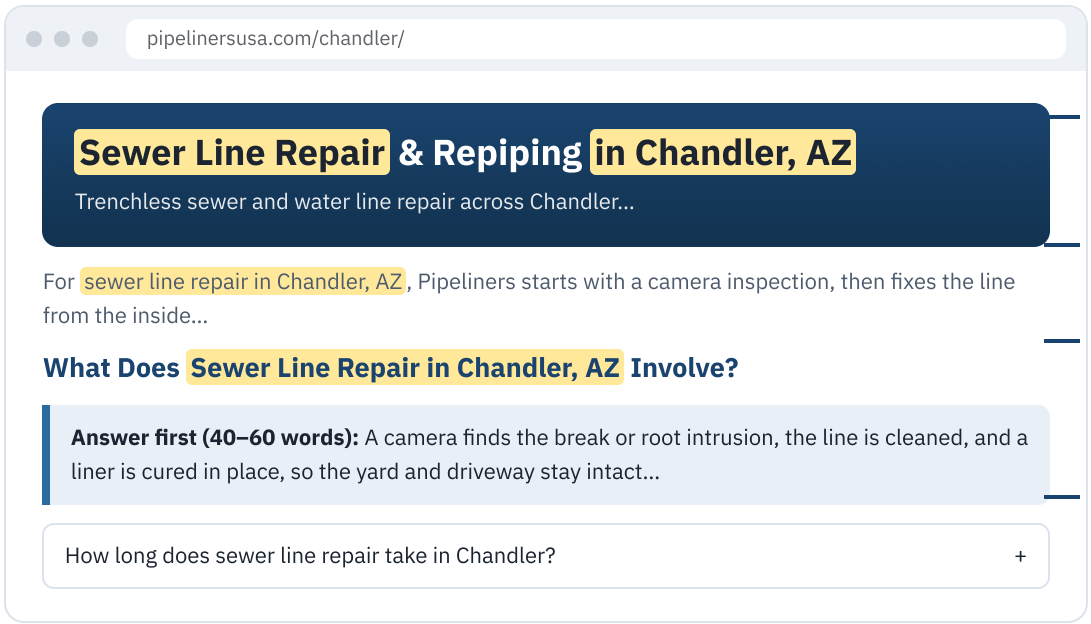

- The only page ranking is the **homepage** or a **Google Ads page**. Those are off-limits.
- The keyword names **another company**.
- It's a service Pipeliners **doesn't offer** or Scott hasn't confirmed.
- The page is **on hold** for a scheduled review.

3 Put the keyword where Google reads first

One keyword per page, used naturally in 5 places. Real example from the live Chandler page (quick win, Sep 16).

↑ How the page looks in Google search results.

DO

- Use the keyword the way a person would say it.
- Keep title under ~60 characters, meta under ~155.
- Write the answer under the H2 so it makes sense on its own. AI answers quote this part.

DON'T

- Repeat the keyword over and over (keyword stuffing).
- Change only the title. Update all 5 places together.
- Put two different main keywords on one page.

Where to edit: titles, meta descriptions and many H1s on this site are managed in **OTTO (Search Atlas)**, not in WordPress. Body text and H2s are edited in WordPress/Elementor. After an OTTO change, purge that one page's cache only.

4 Add what the page is missing

Google moves a page up when it answers the search better than the pages above it. Add one short section or 1–2 FAQs, not a full rewrite.

Good additions

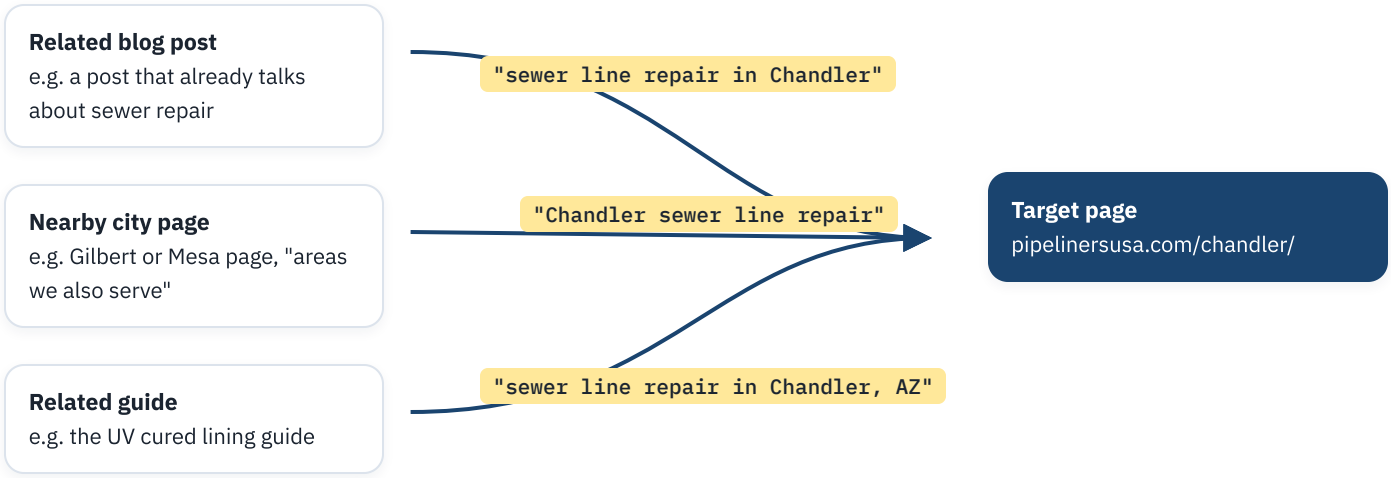

- A short section that answers the exact question.
- 1–2 FAQs people really ask (check the **Queries** tab for wording).
- Arizona detail: caliche soil, clay and cast iron pipes, desert tree roots.
- How the job works: camera inspection first, then the repair.

Never add

- Prices, "free", warranty years, "only company that..." claims unless Scott confirms them.
- Links to competitors or untrusted sites.
- Services Pipeliners doesn't offer (for example gas lines).
- Filler or AI-sounding phrases.

5 Link to it from related pages

Add 2–3 links from related posts or city pages, using the keyword (or a close version) as the link text.

DO

- Place the link inside a sentence where it makes sense.
- Vary the wording slightly between the 2–3 links.

DON'T

- Use "click here" or "here!" as link text.
- Add links from the homepage or Google Ads pages.

6 Tell Google, then wait

Ask Google to re-read the page, then leave it alone for 4 weeks. Changing it again too soon makes it impossible to tell what worked.

Use only the free Request indexing button in Search Console. Don't use paid indexing tools. Don't request indexing for a page that wasn't improved; Google won't change its mind.

The waiting plan

Day 0	Day 1	4 wks	Day 28
Make the change	**Request indexing**	**Don't touch**	**Compare**
Write down the date and what changed (change log).	Free button in Search Console.	No more edits to this page.	Same 28-day length, before vs after.

How to compare fairly

- Search Console → Date → **Compare** → two 28-day windows.
- Same keyword filter, same page.
- Look at position, impressions, then clicks.

What counts as a win

- Average position moves up (lower number).
- More impressions on more days.
- First clicks from that keyword.

Where our blog keywords stand today

Checked day by day in Search Console (Aug 19 – Sep 15, 2026). **No blog keyword is ready yet.** Next check: **Oct 16**.

KEYWORD	PAGE	POSITION	SEEN	READY?
cipp pipe lining cost	CIPP vs Traditional (19) · What is CIPP (3)	63 / 3	22 times, 8 days	**NOT YET** Real search, but split across 2 posts, and the main one sits at 63. Cost wording needs Scott.
slip lining contractors	How Plumbers Use CIPP Lining	17	3 times, 2 days	**WATCH** Re-check Oct 16. Scott to confirm Pipeliners does slip lining.
main line clog phoenix	Phoenix Sewer Line Problems	29	7 times, but 6 on Aug 23	**NO** One-day burst. Nothing since Aug 24.
sewer pipe liners	3 posts at once	12 – 19	7 times, Sep 3 – 6	**NO** Short burst; posts shown side by side, not competing.
The other 9 page-2 keywords	Various	11 – 19	once each	**NO** Watch only.

One-page checklist (print this)

- [ ] **Real?** 3+ impressions on 2+ days, position 8–30, one main page.
- [ ] **Right page?** The page Google already shows. Not the homepage or an Ads page. A service we offer.
- [ ] **5 places:** SEO title · H1 · first 100 words · one question H2 + short answer · meta description.
- [ ] **Missing piece:** one short section or 1–2 FAQs. No prices or unverified claims.
- [ ] **Links:** 2–3 links from related pages with keyword link text.
- [ ] **Log it:** date + what changed in the change log.
- [ ] **Tell Google:** free Request indexing.
- [ ] **Wait 4 weeks,** then compare the same 28-day windows.
