SEO PERFORMANCE REPORT

Pipeliners

pipelinersusa.com

Baseline: June 2026

Latest measurement: September 2026

Sources: Google Search Console, Search Atlas (Site Explorer, Keyword Rank Tracker, Site Audit) and SEMrush

Prepared by TAG Marketing | September 24, 2026

Summary at a glance

This report sets a starting point (June 2026) and compares it with the latest data available (September 2026). Every number in it was read directly from the platform named next to it, and the matching screenshots are included in each section. Nothing on the website was changed to produce this report.

53	20,586	345 to 507	909 to 911
Google clicks June 2026 (GSC)	Google impressions June 2026 (GSC)	Ranking keywords Jun to Sep (Search Atlas)	Site Health score Jun to Sep (Site Audit)

What the data shows, in plain terms

- **Google Search Console (June baseline):** in June 2026 the site got **53 clicks** from Google search in the United States, from **20,586 impressions** (times the site appeared in results). The average position was **44.3**, which is mostly page 4 to 5 of Google.
- **Google Search Console (June vs September):** comparing the same 21 days (1 to 21) of each month, Google traffic is flat: **31 to 32 clicks** and **13,983 to 14,555 impressions**. Average position slipped from 43.1 to 46.1. Clicks from brand-name searches rose (8 to 13) while clicks from all other searches fell (23 to 19).
- **Google Analytics 4:** organic visits are steady (99 to 96 over the same 21 days) and more engaged (engagement rate 48% to 55%). Leads are still being recorded, but none came from organic search.
- **Search Atlas visibility:** the site ranks for more keywords than in June (**345 to 507, up 47%**). Estimated monthly traffic is lower than June (**885 to 552, down 38%**) after peaking in August.
- **Keyword tracking:** of 111 tracked keywords, 19 currently rank in the top 20 and 4 are in the top 10. "florence pipe break repair" ranks **#1** in Phoenix.
- **Technical health:** the Search Atlas Site Health score is essentially unchanged (**909 in June, 911 now**). The current audit lists 4 error types. The biggest is 47 pages with no meta description.
- **SEMrush:** June history is not available on the current plan, so SEMrush starts from September 22, 2026: 574 estimated visits and 519 keywords.

Important: estimates versus real clicks
Google Search Console shows real clicks recorded by Google. Search Atlas and SEMrush "traffic" numbers are estimates calculated by those tools. They measure different things, so the numbers should not be added together or compared with each other directly.

How to read this report

A quick guide to the terms used in the tables and screenshots.

Term	What it means
Clicks	How many times someone clicked through to the website from Google search. Real data from Google.
Impressions	How many times the website appeared in Google search results, even if nobody clicked.
CTR (click-through rate)	Clicks divided by impressions. 0.3% means about 3 clicks for every 1,000 appearances.
Average position	The average ranking spot in Google. Position 1 is the top result; 11 to 20 is page 2.
Organic keywords	How many search terms the site appears for in Google, as counted by the SEO tool.
Estimated traffic	The SEO tool's estimate of monthly visits from Google. Useful for direction, not an exact count.
Site Health score	Search Atlas's technical score out of 1,000, based on a crawl of the website.
Error / Warning / Notice	Search Atlas severity levels. Errors are the most serious; notices are minor suggestions.

Source	Type of data	Used for
Google Search Console	First-party: real data recorded by Google	Clicks, impressions, CTR, position
Search Atlas Site Explorer	Third-party estimate	Keyword count and estimated traffic over time
Search Atlas Rank Tracker	Third-party ranking checks	Positions for 111 chosen keywords
Search Atlas Site Audit	Crawl of the website	Technical score, errors and warnings
SEMrush	Third-party estimate	Second opinion on keywords and traffic

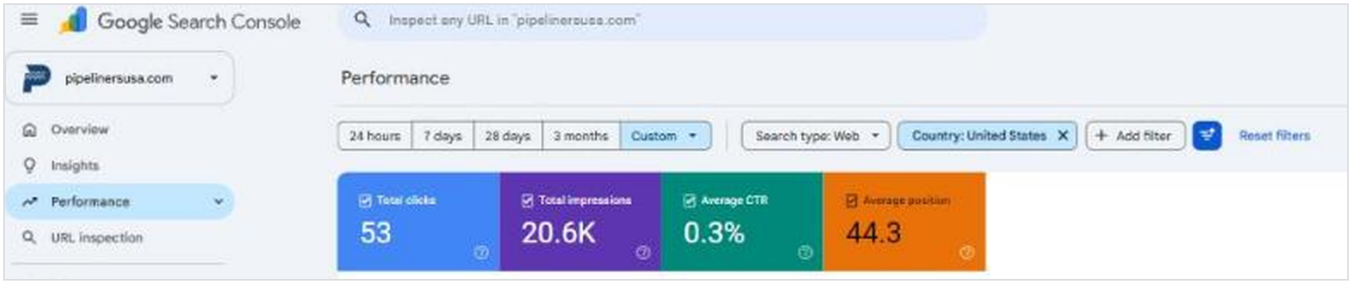

1. Google Search Console: June 2026 baseline

Google Search Console (GSC) is Google's own reporting tool, so this is the most reliable source for how the website performs in Google search. These numbers are the fixed baseline for future comparisons.

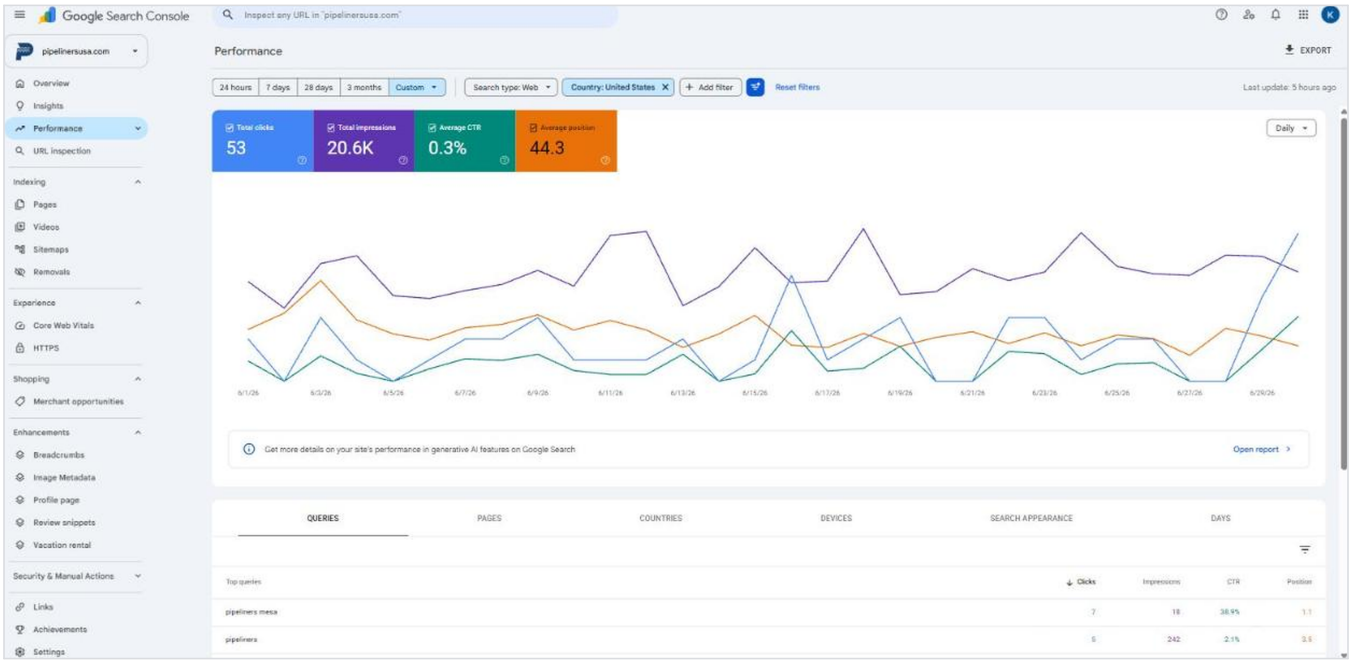

Setting	Value
Property	pipelinersusa.com (Domain property: includes all versions of the site)
Date range	June 1 to June 30, 2026
Search type	Web
Country	United States
Other filters	None (no query, page or device filter)

53	20,586	0.3%	44.3
Total clicks	Total impressions	Average CTR	Average position

- **53 clicks** in 30 days is a little under 2 visits a day from Google search.
- **20,586 impressions**: GSC rounds this to "20.6K" on screen. The exact figure is the total of the 30 daily rows in the Days tab.
- **0.3% CTR**: the site appears often but is rarely clicked, which is typical when rankings sit below page 1.
- **Average position 44.3**: on average, the site shows up around page 4 to 5 of results.

Close-up: property pipelinersusa.com, filters (Custom date, Search type: Web, Country: United States) and the four metric cards.

Screenshot: Google Search Console, Performance on Search results, pipelinersusa.com, Custom date range June 1 to 30, 2026, Search type Web, Country United States. All four metrics enabled; the chart covers every day from June 1 to June 30.

Reading the chart

- **Blue line** = daily clicks, **purple** = daily impressions, **green** = CTR, **orange** = average position.
- Impressions stayed fairly steady through June. Clicks were low and uneven, with several days at zero.
- The table under the chart lists the top searches. The biggest single sources of clicks were searches for the company name, such as "pipeliners mesa" (7 clicks), "pipeliners" (5) and "pipeliners usa" (4).

2. Google Search Console: September comparison

September was not finished when this report was prepared. GSC had data up to September 23, and that last day was only partly counted. To compare fairly, both months use the **same 21 days: June 1 to 21 and September 1 to 21**, with the same filters as the June baseline (Web search, United States).

Metric	Jun 1 to 21	Sep 1 to 21	Change
Clicks	31	32	+1 (+3.2%)
Impressions	13,983	14,555	+572 (+4.1%)
CTR	0.22%	0.22%	No change
Average position	43.1	46.1	3 places lower in results

Searches for the company name vs everything else

GSC has a built-in "Branded" filter that separates searches for the company name from all other searches.

Segment	Jun 1 to 21 clicks	Sep 1 to 21 clicks	Jun impressions	Sep impressions
Branded (company name)	8	13	79	62
Everything else*	23	19	13,904	14,493

* Total minus branded. GSC has no direct "non-branded" view, and this group also includes searches Google hides for privacy.

What this means

- Google traffic is **basically flat**: one more click and 4% more impressions than the same days in June.
- The site appears for a few more searches, but its **average position slipped by about 3 places**, so many of those appearances sit further down the results.
- Clicks from people searching the company name went up (8 to 13). **Clicks from all other searches went down (23 to 19).**
- Search Atlas estimated a 38% traffic drop from June to September (section 4). Google's own data shows traffic flat. GSC is the more reliable source.
- For reference: September to date (Sep 1 to 23, incomplete) is 33 clicks and 15,398 impressions. Full June was 53 clicks. The full-month comparison should be pulled on or after October 3, 2026, once September's last days are final.

Close-up: the numbers side by side

These are the metric boxes cropped from the real GSC screenshots on the next pages, so the numbers are easy to read.

All searches

June 1 to 21, 2026: 31 clicks, 14K impressions, 0.2% CTR, position 43.1.

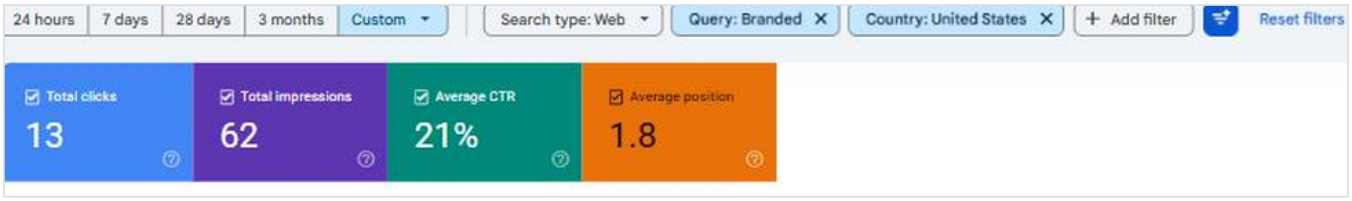

September 1 to 21, 2026: 32 clicks, 14.6K impressions, 0.2% CTR, position 46.1.

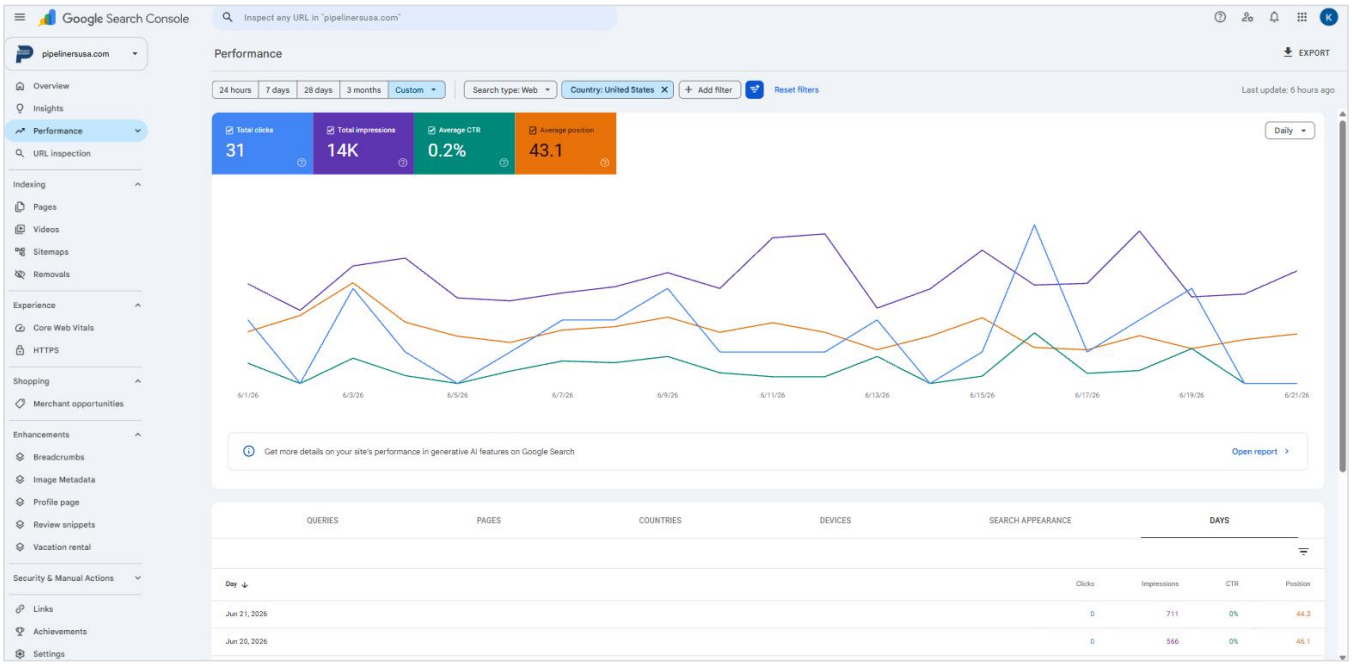

Branded searches only (company name)

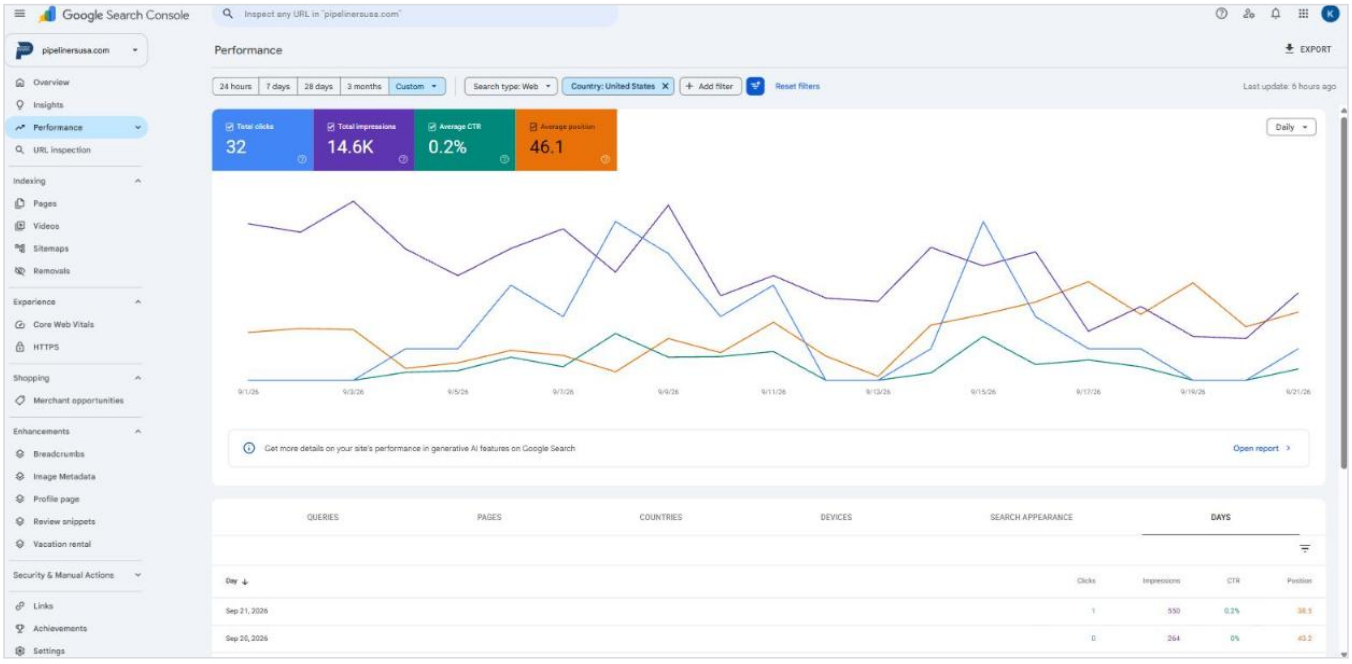

June 1 to 21, 2026, Query: Branded: 8 clicks, 79 impressions, 10.1% CTR, position 1.9.

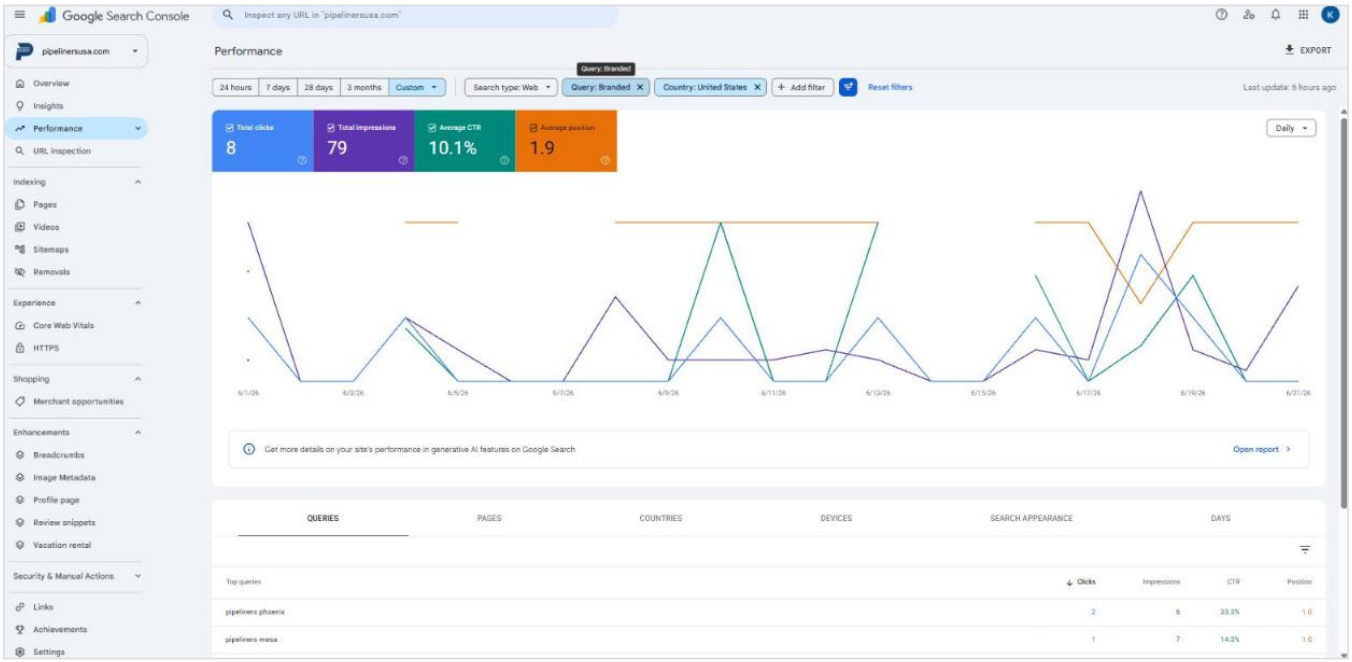

September 1 to 21, 2026, Query: Branded: 13 clicks, 62 impressions, 21% CTR, position 1.8.

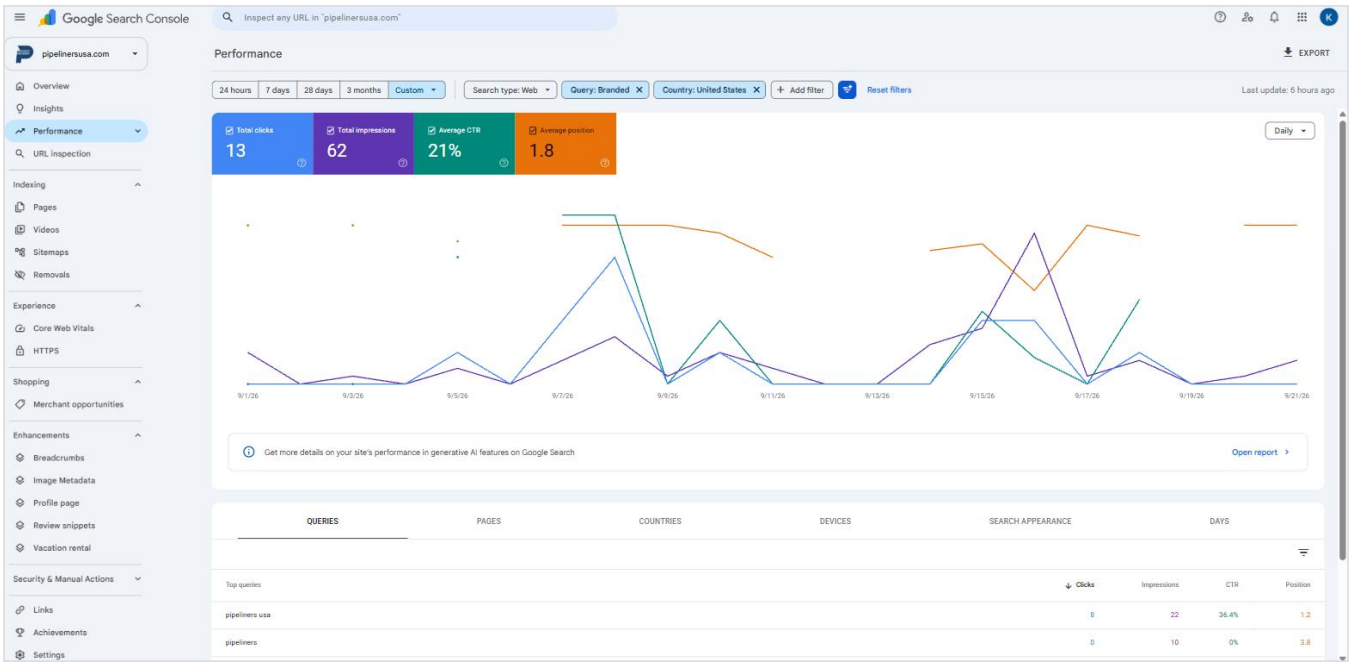

Screenshot: Google Search Console, June 1 to 21, 2026 (Web, United States): 31 clicks, 14K impressions, 0.2% CTR, position 43.1.

Screenshot: Google Search Console, September 1 to 21, 2026 (Web, United States): 32 clicks, 14.6K impressions, 0.2% CTR, position 46.1.

Screenshot: June 1 to 21, 2026 with the "Query: Branded" filter: 8 clicks, 79 impressions, 10.1% CTR, position 1.9.

Screenshot: September 1 to 21, 2026 with the "Query: Branded" filter: 13 clicks, 62 impressions, 21% CTR, position 1.8.

3. Google Analytics 4: website visits and leads

Google Analytics 4 (GA4) measures what visitors do once they reach the website: how many visits, how long they stay, and whether they become a lead. Property: **Pipeliners USA Website**. Same fair comparison as GSC: **September 1 to 21 vs June 1 to 21, 2026**. These screenshots were exported from GA4 by the TAG team.

Organic Search visits (people arriving from Google and other search engines)

Metric	Jun 1 to 21	Sep 1 to 21	Change
Sessions (visits)	99	96	-3.0%
Engaged sessions	48	53	**+10.4%**
Engagement rate	48.5%	55.2%	**+13.9%**
Average engagement time	52s	1m 01s	**+15.9%**
Key events (leads)	0	0	No change

An "engaged session" is a visit that lasts over 10 seconds, views 2 or more pages, or triggers a key event.

Whole website, all channels

Channel	Jun 1 to 21	Sep 1 to 21	Change	Leads Jun / Sep
Direct	319	549	+72%	6 / 2
Cross-network (ads)	548	274	-50%	0 / 0
Display (ads)	193	258	+34%	0 / 0
Paid Search	92	105	+14%	1 / 2
Organic Search	**99**	**96**	**-3%**	**0 / 0**
Referral	19	20	+5%	2 / 0
Other small channels	13	27		0 / 0
Total	**1,283**	**1,328**	**+3.5%**	**9 / 4**

Organic Search is highlighted.

What this means

- **Organic visits are steady** (99 to 96), which matches Google Search Console over the same days (31 to 32 clicks).
- **Organic visitors are more engaged than before** and are the most engaged of all channels: over half of their visits are engaged, and they stay about a minute. Direct visits average only 8 seconds.
- Organic search is about **7% of all website visits**. Most visits come from ads and direct traffic.
- **No leads came from organic search** in either period. All leads came from other channels.

Organic landing pages

The pages where organic visitors first arrive (June 1 to 21 vs September 1 to 21).

Page	Jun 1 to 21	Sep 1 to 21	Change
/ (home page)	64	51	-20%
(not set)	11	13	+18%
/reline-vs-replace-best-options-for-drain-and-sewer-pipes	13	5	-62%
/a-homeowners-guide-to-detecting-and-preventing-root-intrusion-in-pipes	3	1	-67%
/gilbert	0	3	New
/14-warning-signs-your-sewer-pipes-may-be-leaking	0	2	New
/trenchless-drain-pipe-repair	0	2	New
/what-causes-pinhole-leaks-in-copper-pipes	0	2	New
/what-is-cipp	0	2	New
/when-is-pipe-descaling-necessary	0	2	New

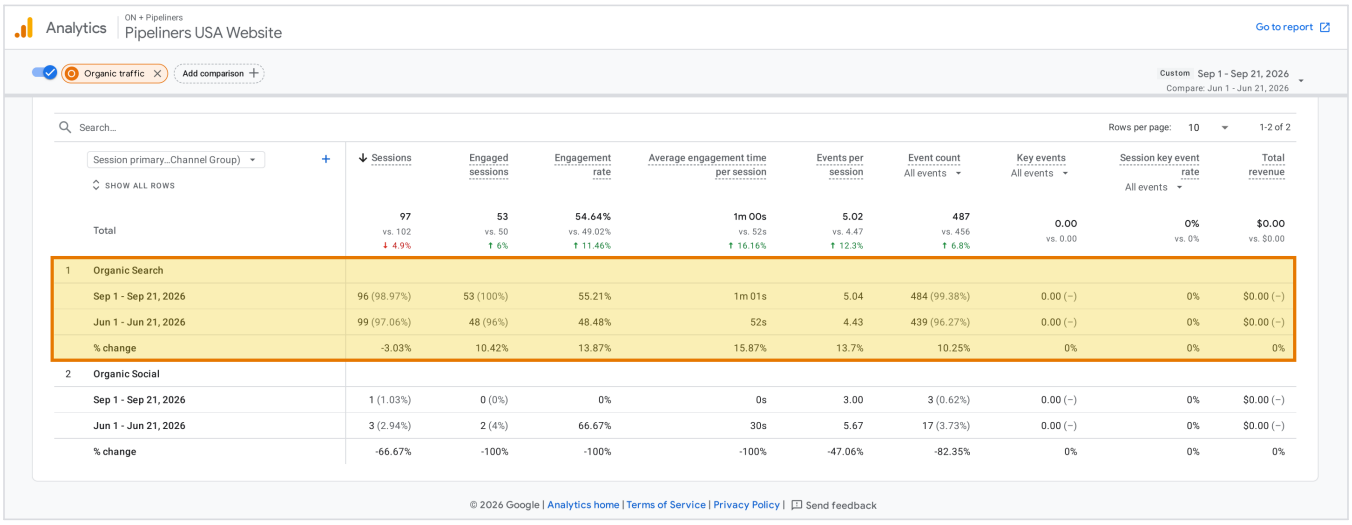

GA4 shows "0%" for pages that had no June visits, because it cannot divide by zero. They are marked "New" here.

- Organic visits now arrive on **more pages** than in June (24 landing pages in September 1 to 21 vs 16 in all of June). Several blog posts and the Gilbert page appear for the first time.
- The home page still brings about half of all organic visits.

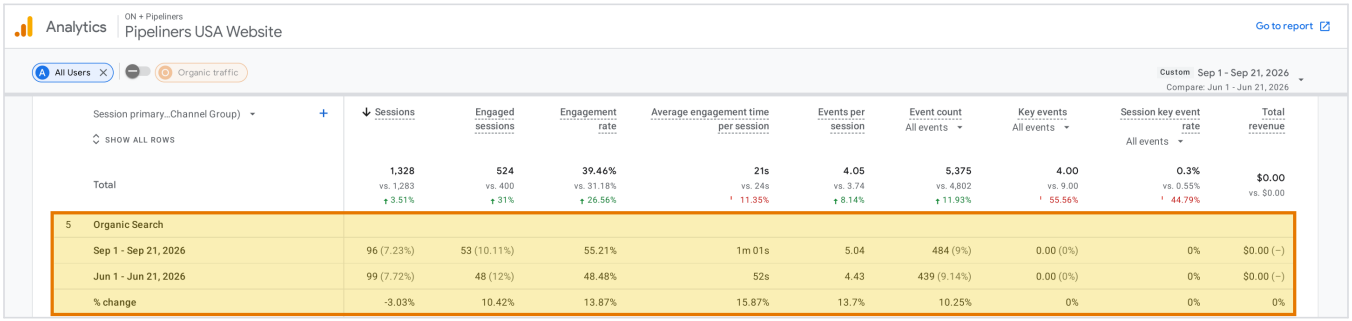

Leads over time

The lead event in GA4 is **generate_lead** (31 times from June 1 to September 23). Its weekly totals match the key event numbers above (9 in June 1 to 21, about 4 in September 1 to 21), so it is the site's key event.

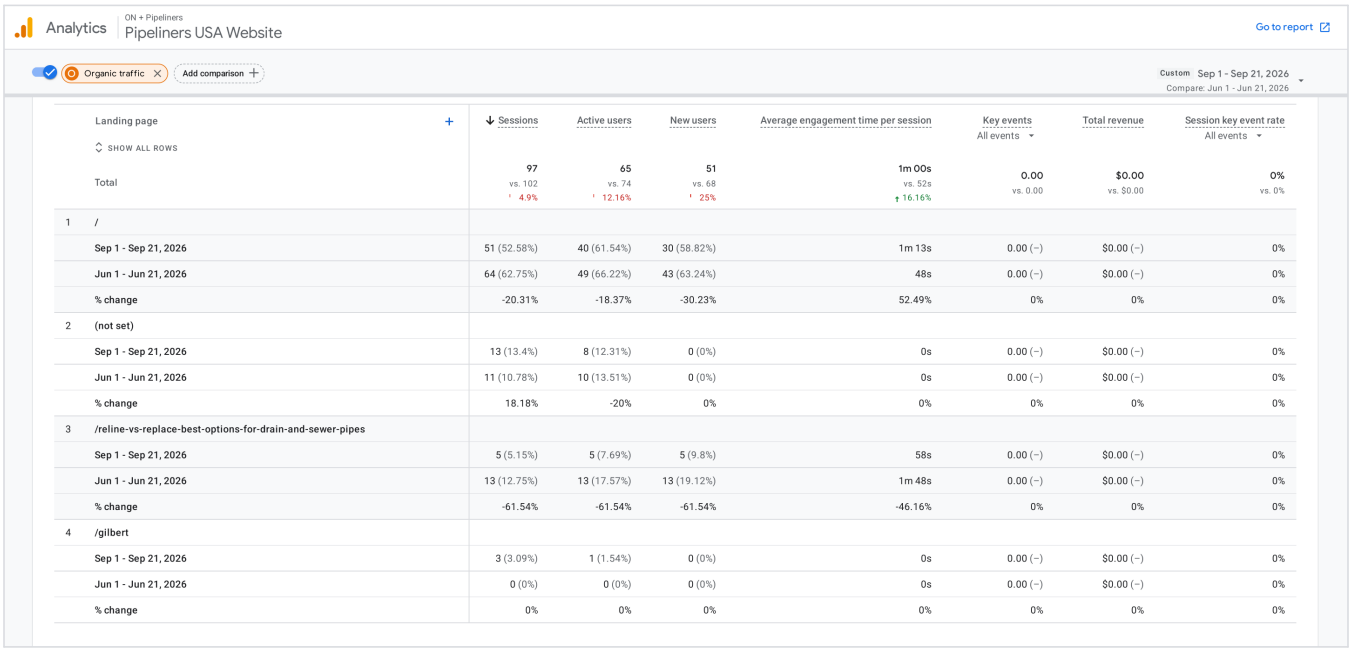

- **Lead tracking is working**: leads kept recording every few days through September.
- Leads are low and uneven: 0 to 5 a week, about 2 a week on average. With so few leads, one busy week (for example 5 in the first week of June) changes a 3-week comparison a lot, so the drop from 9 to 4 is mostly normal variation.

Screenshot: GA4 Traffic acquisition, "Organic traffic" comparison, September 1 to 21 vs June 1 to 21, 2026. Organic Search rows highlighted: 96 vs 99 sessions, engagement rate 55.21% vs 48.48%.

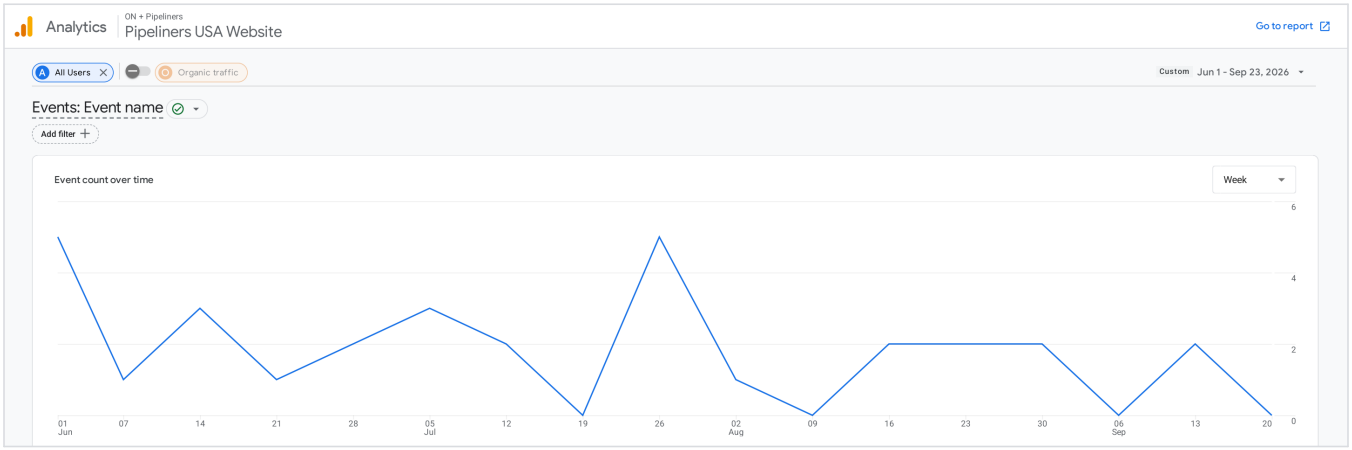

Screenshot: GA4 Traffic acquisition, All Users (all channels), same dates. Site totals at the top (1,328 vs 1,283 sessions) and the Organic Search rows highlighted (7.23% of all sessions in September).

	Landing page	Sessions	Active users	New users	Average engagement time per session	Key events All events	Total revenue	Session key event rate All events
	Total	97 vs. 102 ↓ 4.9%	65 vs. 74 ↓ 12.16%	51 vs. 68 ↓ 25%	1m 00s vs. 52s ↑ 16.16%	0.00 vs. 0.00	$0.00 vs. $0.00	0% vs. 0%

Screenshot: GA4 Landing page report, "Organic traffic", September 1 to 21 vs June 1 to 21, 2026 (totals and top landing pages).

Screenshot: GA4 Events report, generate_lead plotted by week, June 1 to September 23, 2026 (31 in total).

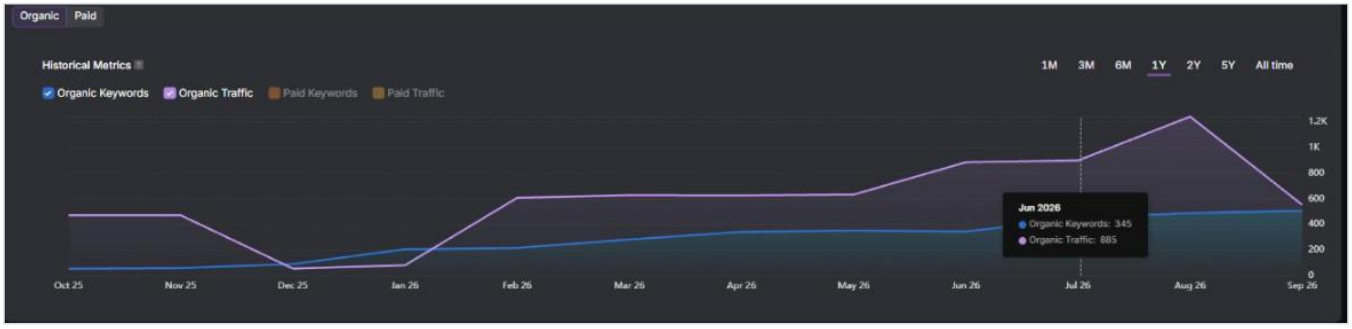

4. Search Atlas: organic visibility, June vs September

Search Atlas (Site Explorer) estimates how many keywords the site ranks for and how much traffic that brings, month by month. Both the June and September figures below come from the same chart, so they are measured the same way.

Metric (United States)	June 2026	September 2026	Change	% change
Organic keywords	345	507	+162	+47.0%
Estimated organic traffic	885	552	-333	-37.6%

What this means

- The site now appears for **162 more search terms** than in June, so its footprint in Google has grown.
- Estimated traffic rose through the summer, peaked in **August**, and then dropped in September. September is **38% below June** on this estimate.
- More keywords with less traffic usually means many of the new keywords rank low (page 2 or deeper) or have few searches. Search Atlas shows most rankings in lower positions.

Screenshot: Search Atlas Site Explorer, Historical Metrics (1 year), tooltip for June 2026: Organic Keywords 345, Organic Traffic 885. United States.

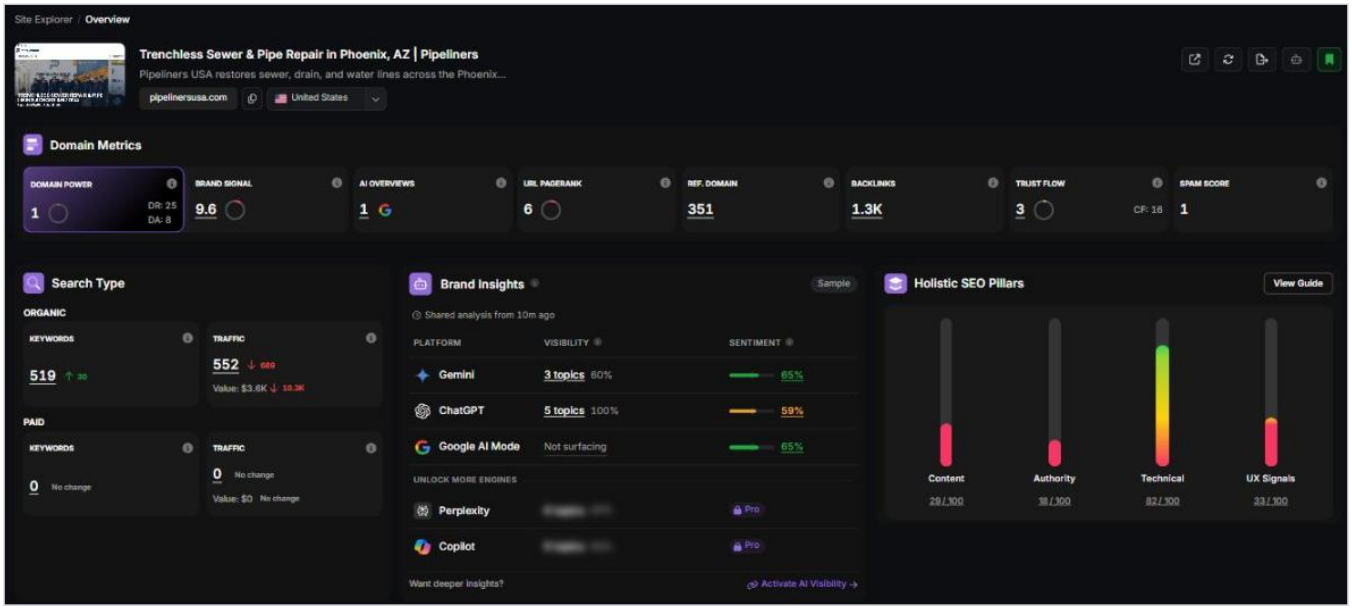

Screenshot: same chart, tooltip for September 2026: Organic Keywords 507, Organic Traffic 552.

Search Atlas: long-term trend and current snapshot

The all-time chart shows the site had almost no organic visibility before 2023. Growth started in 2024 and became steady in 2025 and 2026.

Screenshot: Search Atlas Site Explorer, pipelinersusa.com, United States, Historical Metrics set to All time (January 2012 to September 2026). Purple = estimated traffic, blue = keywords.

Screenshot: Search Atlas Site Explorer overview (September 2026). The Organic Keywords card shows 519. This card counts slightly more broadly than the chart and the United States row (507), so 507 is used for the June vs September comparison.

5. Search Atlas: keyword rank tracking

The Keyword Rank Tracker checks where the site ranks in Google for a fixed list of keywords. This uses the existing Pipeliners project; nothing was added or changed.

Setting / result	Value
Keywords tracked	111
Locations	Mixed: some keywords are tracked for Phoenix, Arizona; others for the whole United States
Search engine / device	Google, desktop
Last update	September 15, 2026
Average position	13 (2 positions lower than the previous check)
Estimated traffic	319 (project card)
Top 3 / Top 10 / Top 20 / Top 100	1 / 4 / 19 / 19
Not ranking	92 of 111 keywords

Note: the summary card says 3 keywords are in the top 10, while the table and the "Positions on Sep 15" panel both add up to 4 (positions 1, 4, 5 and 8). Both figures are reported here as shown.

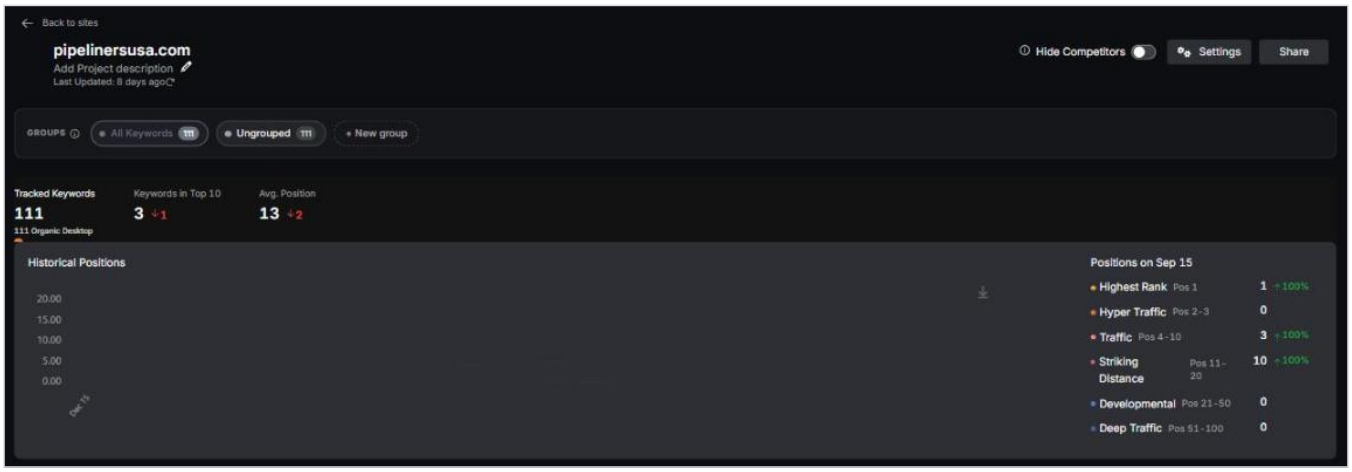

Best-ranking keywords

Keyword	Location	Position	Monthly searches
florence pipe break repair	Phoenix	**1**	0*
florence pipe break repair	United States	**4** (up from 5)	10
pipeliners (company name)	Phoenix	5	3K
buckeye pipe break repair	Phoenix	8	0*
drain cleaning fort mcdowell	Phoenix	11	0*
buckeye az pipe break repair	United States	12 (new)	0*
epoxy pipe lining phoenix az	United States	13 (new)	0*
sewer line repair rio verde	United States	14 (new)	0*

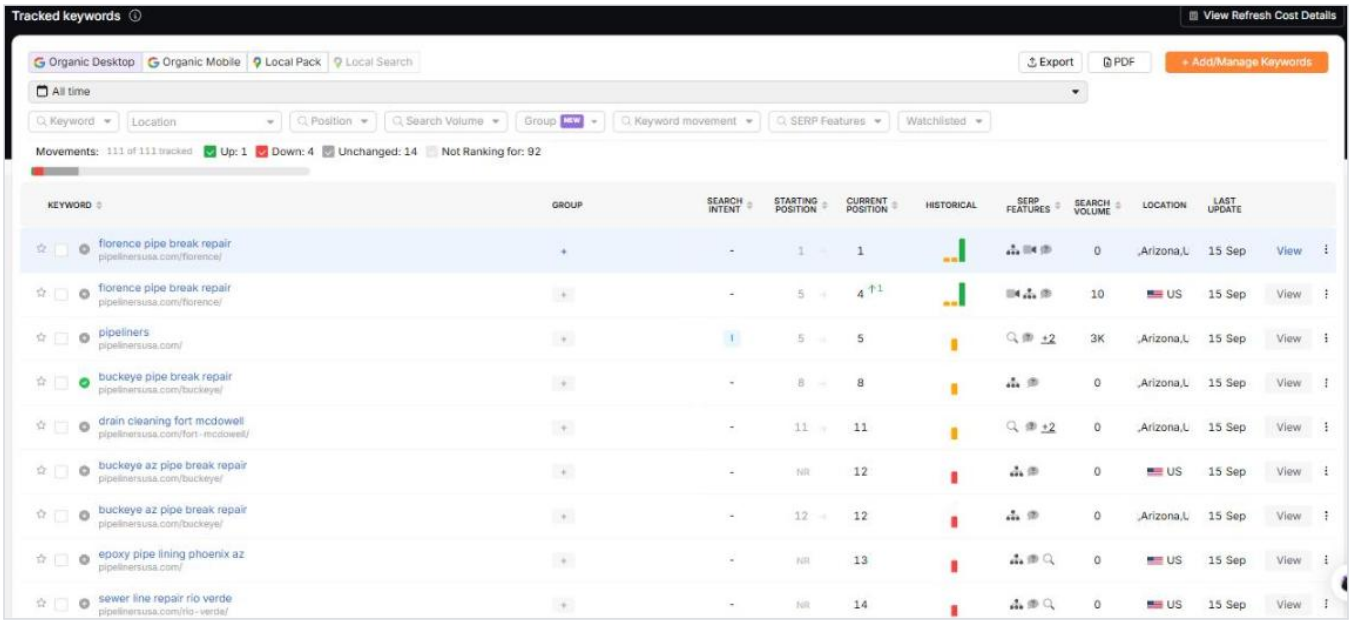

* "0" means the tool has no search-volume estimate for that exact phrase. Local, specific phrases often show 0 even though real people search them.

Keywords that moved down

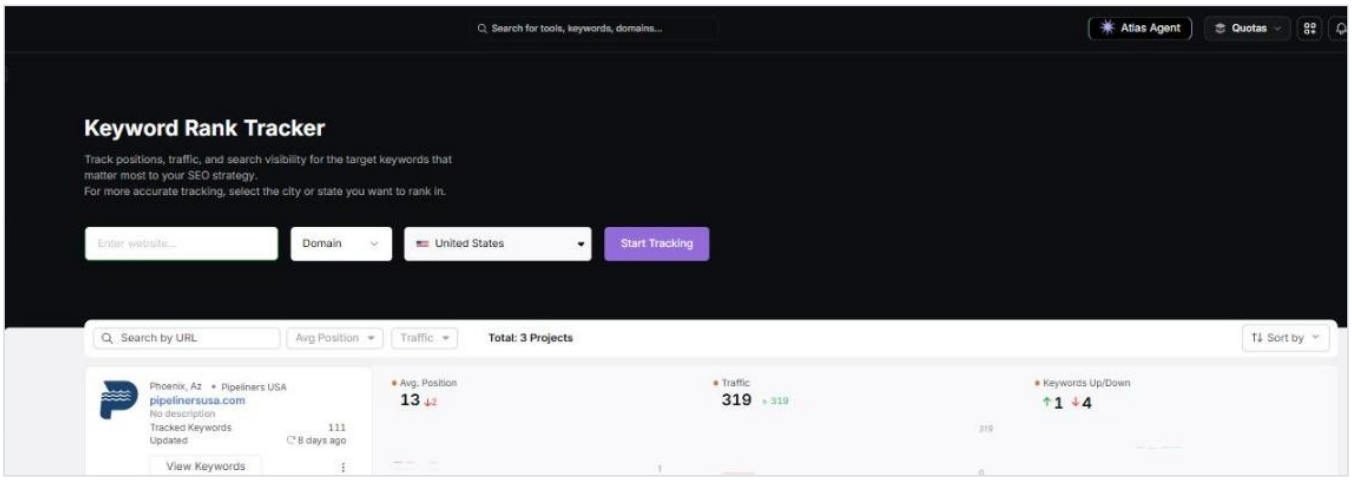

- "buckeye pipe break repair" (United States): position 4 to 17.
- "clogged drain fort mcdowell" (United States): position 6 to 17.
- "drain cleaning fort mcdowell" (United States): position 12 to 17.
- "sewer pipe lining" (United States, about 3,000 monthly searches): not ranking.

Screenshot: Search Atlas Keyword Rank Tracker, pipelinersusa.com project overview: 111 tracked keywords, 3 in top 10 (card), average position 13, and the "Positions on Sep 15" breakdown.

Screenshot: tracked keywords table sorted by current position, showing starting position, current position, search volume and location.

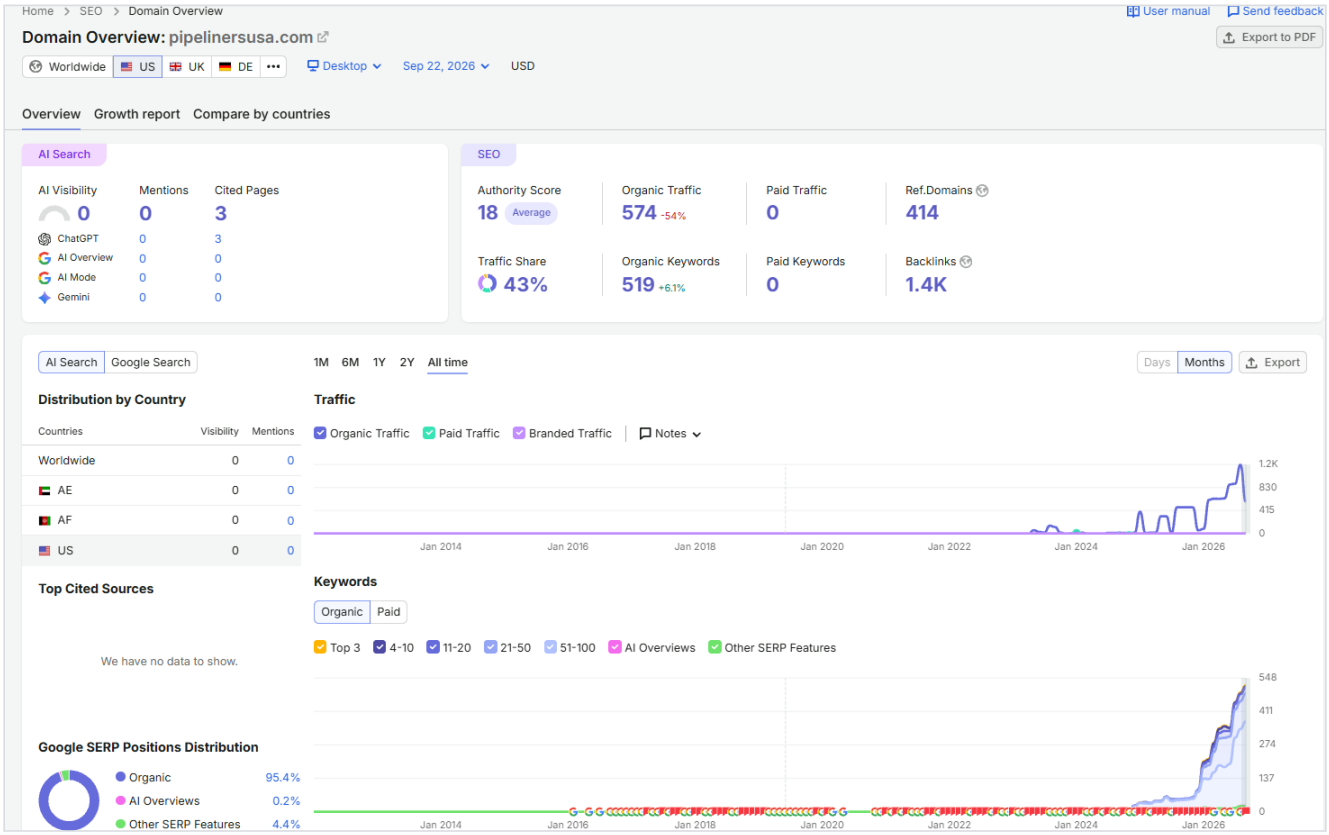

Screenshot: Rank Tracker project card for pipelinersusa.com (Phoenix, AZ): average position 13, estimated traffic 319, 111 tracked keywords. Cropped to show the Pipeliners project only.

6. SEMrush: September 2026 snapshot

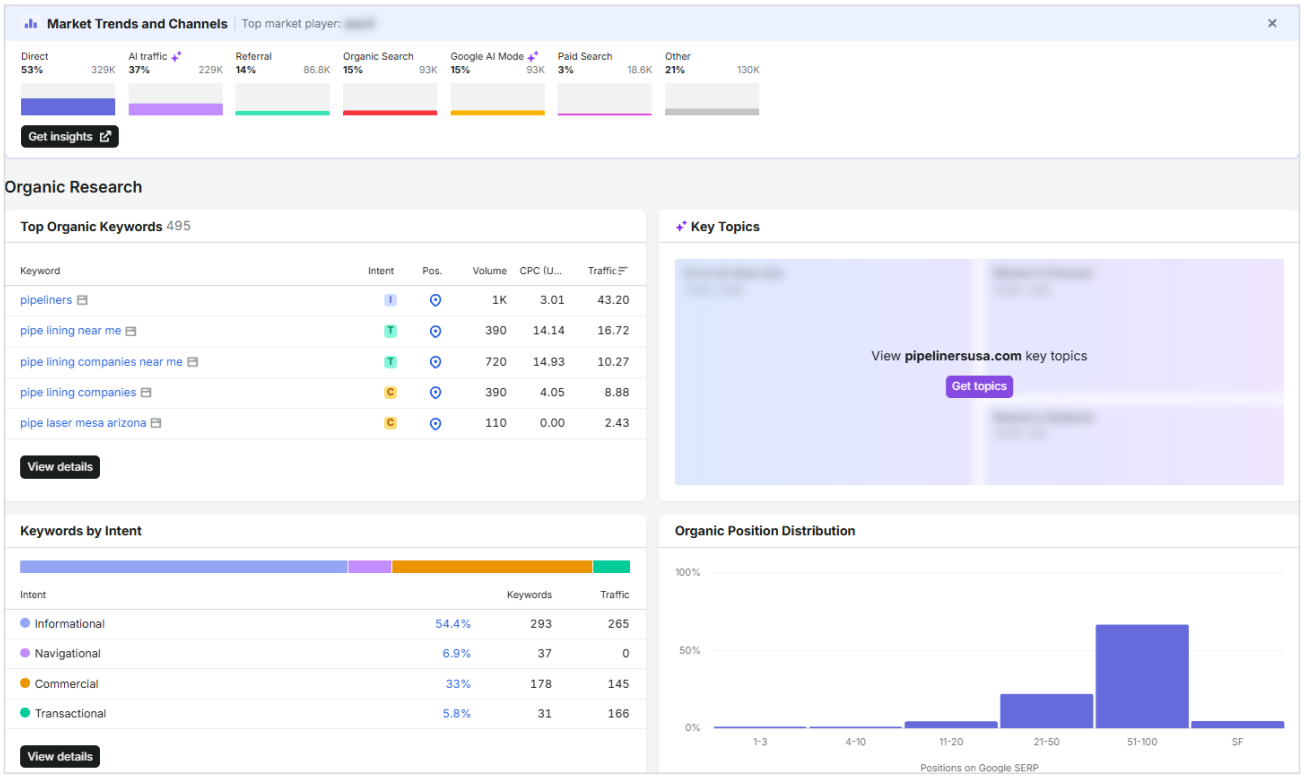

SEMrush is a second third-party SEO tool. The current plan does not allow selecting a past date, so **June 2026 SEMrush numbers are not available**. SEMrush therefore starts from September 22, 2026, and future SEMrush checks will be compared against this snapshot.

Metric (United States, desktop, Sep 22, 2026)	Value
Estimated organic traffic	574
Organic keywords	519
Authority Score	18
Referring domains / backlinks	414 / 1.4K
Keywords by intent	Informational 293, Commercial 178, Navigational 37, Transactional 31

SEMrush's trend chart tells the same story as Search Atlas: very little visibility before 2024, then strong growth in keywords through 2025 and 2026, with traffic dropping at the latest point.

Screenshot: SEMrush Domain Overview, pipelinersusa.com, US database, Desktop, September 22, 2026, trend set to All time.

Screenshot: SEMrush Organic Research (US): top organic keywords, keywords by intent and organic position distribution.

7. Technical health: Search Atlas Site Audit

A Site Audit crawls the website like Google does and flags technical problems. A fresh crawl was run on September 23, 2026 using the existing audit settings. No fixes were made.

	June 2026 baseline	Current (Sep 23, 2026)
Site Health score	909 / 1000 (crawl of June 16)	911 / 1000
Pages crawled	Not stored by Search Atlas	215 of 245
Errors	Not stored	4 issue types
Warnings	Not stored	6 issue types
Notices	Not stored	34 issue types
Server errors (5xx)	Not stored	0 (8 on Sep 15)

Why June only has a score
Search Atlas keeps the Site Health score for past crawls but keeps the full issue list for the latest crawl only. June 16 was the closest crawl to June 1; before that, the previous crawl was December 15, 2025. On score alone, 909 to 911 is essentially unchanged.

Current errors (most serious)

Issue	What it means	Pages
Meta description missing or empty	The short summary Google can show under the page title is missing.	47
Page is orphaned	No other page on the site links to it, so Google may struggle to find it.	5
Non-indexable page in sitemap	The sitemap lists pages that are set not to appear in Google.	4
Title not unique	Two pages share the same or very similar title.	2

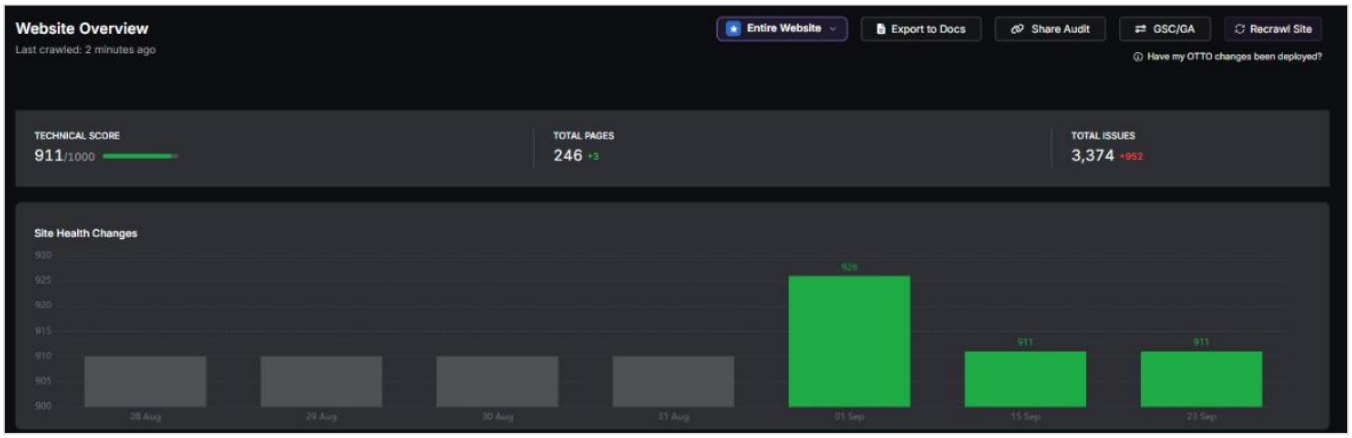

Current warnings

Issue	What it means	Pages
H1 length	The main page heading is shorter than 20 or longer than 70 characters.	37
Redirecting internal links	Links on the site point to an old address that redirects.	25
Canonical link invalid	A page hidden from Google points its canonical tag at a different page.	19
Title length	Page title is outside 30 to 100 characters.	14
H1 missing or empty	The page has no main heading.	2
Core Web Vitals failed	Real-user speed test: first paint 2.8 s, layout shift 0.16, main content 3.6 s.	Site-wide

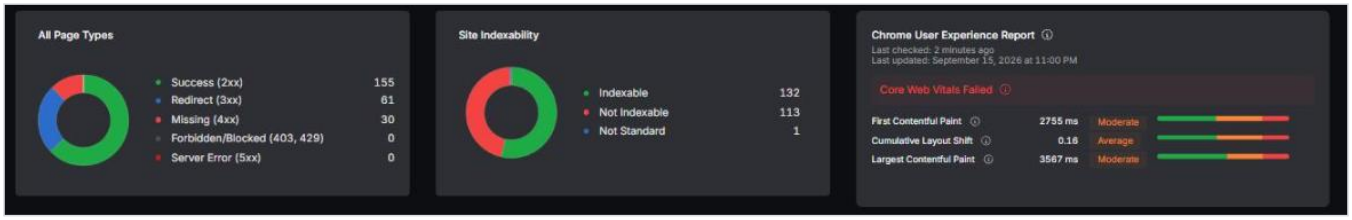

Other crawl facts: 155 pages return normally (200), 61 redirect (3xx), 30 are missing (4xx), 0 server errors. 132 pages can appear in Google and 113 are set not to (for example noindex pages, redirects and missing pages).

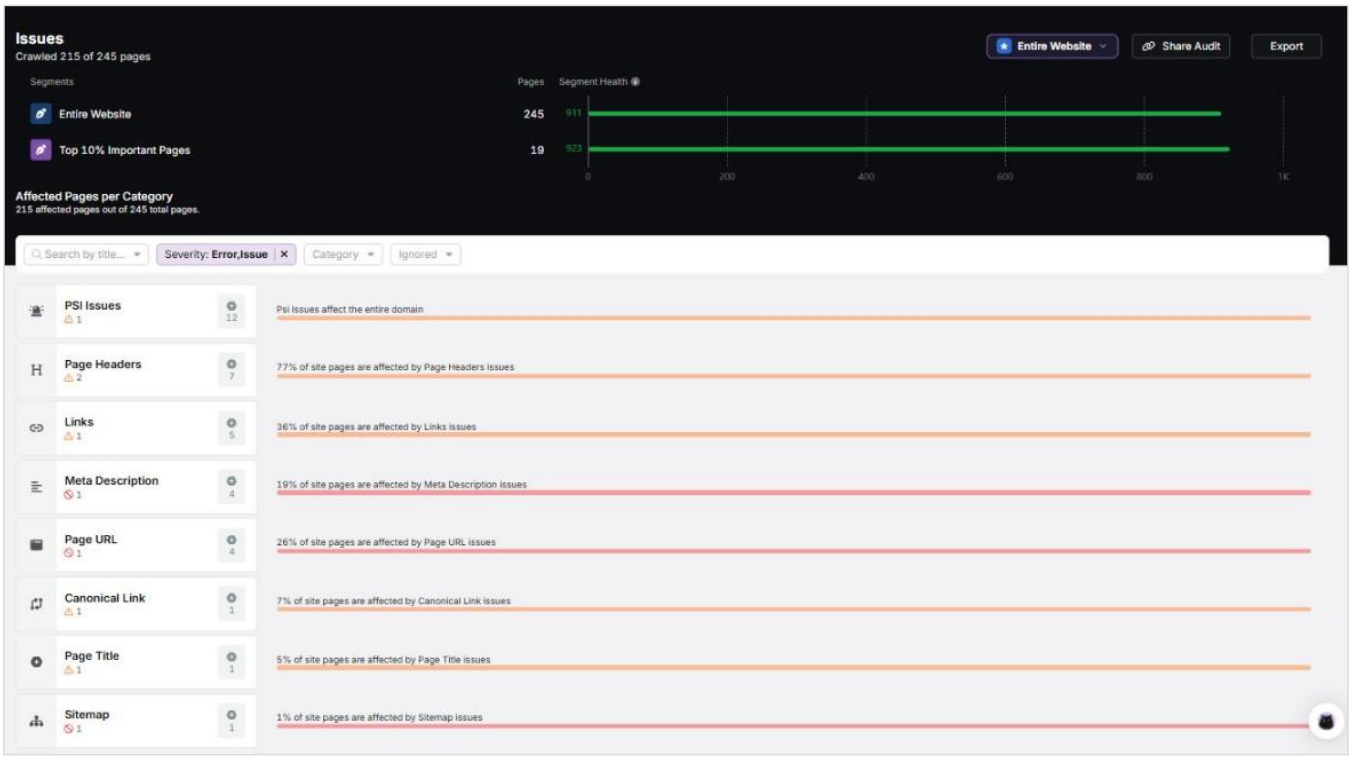

Screenshot: Search Atlas Site Audit, Site Health Changes (1 year), captured before the new crawl. Tooltip: 16 June 2026, Site Health 909. Earlier bar: 15 December 2025, 903.

Screenshot: Site Audit overview after the fresh crawl: Technical Score 911/1000, 246 total pages, 3,374 total issue instances.

Screenshot: current page status codes, indexability and Chrome User Experience (Core Web Vitals).

Screenshot: Site Audit Issues page filtered to Error and Issue (warning) severity. Red circle icons are errors; orange triangles are warnings. "Crawled 215 of 245 pages."

8. Notes and limitations

These points explain where a like-for-like comparison is not possible, so the numbers are not over-read.

- **GSC September** is compared on days 1 to 21 only, because September was not finished and the last GSC days are preliminary. A full-month comparison (September 1 to 30 vs June) should be pulled on or after October 3, 2026.
- **GA4 vs GSC**: GA4 organic sessions and GSC clicks are different measures (GA4 also counts other search engines and repeat visits), so they are compared by direction only, not by number. GA4's "Organic traffic" segment also includes a few Organic Social visits (1 to 3); the Organic Search tables exclude them.
- **Search Atlas traffic** is an estimate. It is useful for showing direction (up or down) but is not a count of real visits.
- **SEMrush** has no June data on the current plan, so SEMrush changes can only be measured from September 22, 2026 onward.
- **Search Atlas keyword count**: the headline card shows 519 while the chart and the United States row show 507. The report uses 507 so that June and September come from the same source.
- **Rank tracker top 10**: the summary card shows 3; the table and the positions panel show 4.
- **Site Audit**: only the score is stored for June, so no issue-by-issue comparison is possible. Search Atlas also added new checks in the latest crawl (image alt-text quality and large CSS files), which inflates the total issue count (3,374, up 952), so totals are not comparable between crawls. After the new crawl, the history chart showed the September 15 bar as 911 although the audit record for that date is 926, so older bars should be treated as approximate.
- Changes in these numbers show what happened during the period. They do not by themselves prove what caused it.
