MODULE 10: REAL CASE STUDIES & REVENUE BREAKDOWNS

REPEAT AFTER ME:

Theory is useless without proof. I'm not going to tell you what "should" work. I'm going to show you what DID work — with real numbers, real timelines, and real screenshots.

Every case study in this module is something I did personally or helped a client achieve through LocalRank.so. No hypotheticals. No "imagine if" scenarios. Just data.

If you take ONE thing from this entire course, take this: the people making money with AI SEO are not smarter than you. They just started before you did. Today, you start.

🎯 Learning Objectives

By the end of this module, you will:

- Understand exactly how I generated $3.4M in revenue from SEO in 2024
- Have a complete breakdown of 6 real case studies with exact numbers
- Know which strategies produce the highest ROI

17

FINAL THOUGHTS

APPENDIX: ADDITIONAL RESO...

10.1 Case Study #1: ChatGPT Ranking in 10 Days ($50K in 90 Days)

Target keyword: "best local SEO tools"

Timeline: 10 days to citation, 90 days measured

Total investment: $250

Total attributed revenue: $50,000+

This is the case study that made me go all-in on AI SEO. I followed the exact 10-day blueprint from Module 3 — 100 LLM PBNs plus 1 quality guest post — and the results blew past anything I expected.

Day 1-2: LLM PBN Setup. I registered 10 expired domains through Namecheap for about $100 total. Used shared hosting at $50/year. Installed WordPress on all of them with free themes and minimal plugins. Each site got a homepage, about page, contact page, and blog section. Nothing fancy. These don't need to look pretty — they need to get indexed.

Day 3-4: Content Blitz. I generated 100 blog posts using ChatGPT — 10 per domain. Each post was 500-1,000 words covering a topic adjacent to local SEO. Every single post mentioned LocalRank.so naturally in context, with a link back to our main comparison page. I published them over 48 hours with staggered dates so they didn't all drop at once.

Day 5-6: Guest Post. I wrote a 2,200-word "Best Local SEO Tools in 2025" article. LocalRank was positioned #1 with a 450-word section covering features, pricing, pros/cons, and who it's best for. Competitors filled spots 2-10 with shorter 200-word sections each. I added a comparison table and 10 FAQ questions.

marketing blog that charged $200 for placement. Simultaneously, I submitted all 100 PBN posts to indexing services and used the Instant Indexing WordPress plugin on each site.

Day 8-9: Guest Post Goes Live. Published with proper schema markup, shared across social media, built 5 quick backlinks from social profiles and web 2.0s.

Day 10: Verified. I searched "best local SEO tools" in ChatGPT. LocalRank.so was cited #1 with a direct link to our site.

Results over 90 days:

- ChatGPT citation within 24 hours of PBN indexing
- #1 citation position by day 10
- 340% increase in organic traffic within 30 days
- 12,000+ visits attributed to AI search referrals in 90 days
- $50K+ in new subscriptions directly attributed to ChatGPT traffic
- 43% conversion rate from ChatGPT referral traffic (vs 2.1% from Google organic)

That last number is the one that changed everything for me. ChatGPT traffic converts at 20x the rate of traditional Google traffic because the user already trusts the recommendation. They're not comparison shopping — they're buying.

Total cost: $250. ROI: 20,000%.

💡 **Pro Tip:** ChatGPT traffic converts insanely well because users treat AI recommendations like personal referrals. Optimize for citation position #1 — it gets 60%+ of the clicks, just like Google's #1 position.

17

10.2 Case Study #2: LocalRank.so — From Idea to $50K MRR in 5 Months

Product: Local SEO SaaS platform **Timeline:** Idea to $50K MRR in 5 months **Development investment:** $20,000 **Current ARR:**

$600K+

I built LocalRank because I was frustrated. I was running an agency, manually submitting citations to 200+ directories, tracking rankings with spreadsheets, and praying that direction boost services actually worked. Nothing was integrated. Nothing was built for AI SEO. So I built it myself.

Month 1: $2K MRR (Beta). Launched with basic citation building and rank tracking. Invited 50 agency owners from my Advise.so community to beta test. 20 signed up at $97/mo. Feedback was brutal but useful — they wanted one-click citation submission, not a guided wizard. I rebuilt the entire citation flow in 2 weeks.

Month 2: $8K MRR (1-Click Citations Launch). The rebuilt citation builder let users submit to 500+ directories with a single click. This was the feature that got people talking. Word spread through agency communities. 82 paying users by end of month. Average revenue per user: $97/mo.

Month 3: $18K MRR (Direction Boost Added). We launched LocalBoost — our Direction Boost feature using real drivers. Agencies could order rank boosts for their clients directly from the dashboard. This became our highest-margin feature and the #1 reason agencies chose us over competitors. 185 paying users.

Month 4: $32K MRR (LLM Citations Launched). This was the game-changer. We built the LLM Citation product — AI-generated listicles published across our 500+ domain network, indexed in 2-4 hours, with the client's business positioned #1. No other tool offered this. Agencies could now sell "AI search optimization" as a service. 310 paying users.

17

enterprise clients — multi-location brands with 50-200 locations each. The white-label features and API access at the Enterprise tier attracted marketing agencies managing large portfolios. 421 paying users. $600K ARR. 98% customer satisfaction.

Current breakdown:

- 50% of revenue from agencies (white-label)
- 30% from multi-location brands
- 20% from single-location businesses
- Customer acquisition cost: $45
- Lifetime value: $1,400+
- Monthly churn: 3.2%

Growth channels:

- Build in public (daily episodes) — 35% of signups
- Reddit distribution — 20%
- Cold email to agencies — 20%
- Word of mouth / referrals — 15%
- Twitter/X — 10%

Key insight: The timing was everything. AI SEO was brand new in early 2025. Agencies needed tools and there weren't any. If I'd launched 6 months later, I'd be competing against 10 other tools instead of being first to market. Speed matters more than perfection.

10.3 Case Study #3: Parasite SEO — $2K/Day Peak Revenue

Niche: Affiliate marketing (consumer products) **Duration:**

This is the fastest money I've ever made in SEO. It's also the least sustainable. That's the trade-off with parasite SEO — high returns, short windows.

Day 1: Discovery. I found a high-DR platform (DR 88) that allowed user-generated content with minimal moderation and do-follow links. The platform had a content publishing feature similar to Medium but with higher domain authority. I tested one piece of content — a "Best [Product Category]" listicle with Amazon affiliate links — and it indexed within 3 hours.

Day 2-3: Content Blitz. I created 20 pieces of affiliate content using ChatGPT. Each was 1,500-2,000 words in the ranked listicle format. Every article targeted a different buying keyword — "best wireless earbuds," "best standing desk," "best protein powder," etc. All monetized with Amazon Associates links. Published all 20 over 48 hours.

Day 4-5: Rankings Appear. 14 of the 20 articles ranked on Google's first page within 48 hours. That's the power of a DR 88 domain. Three articles hit position 1-3 for their target keywords. Traffic started flowing immediately.

Day 6-8: Peak Revenue. February 17 was the peak — $2,000 in a single day from Amazon Associates commissions. Average daily revenue over the 8-day run was $1,037. Total: $8,300. The top 3 performing articles accounted for 70% of the revenue.

Day 9: Shut Down. The platform caught on and removed all 20 articles. Account banned. Game over.

Revenue breakdown:

- Amazon Associates: $3,320 (40%)
- Direct affiliate programs: $2,905 (35%)
- Display ad revenue share: $2,075 (25%)
- **Total: $8,300**

- Top 3 articles: $5,810 (70%)
- Next 5 articles: $1,660 (20%)
- Remaining 12 articles: $830 (10%)

Key lessons learned:

1. Parasite SEO has a short shelf life — treat it like a sprint, not a marathon
2. Move FAST when you find a working platform. I should have published 50 articles, not 20
3. Always monetize immediately. Don't wait to "build up traffic first"
4. Diversify across multiple parasites simultaneously. If I'd been on 3 platforms, the ban wouldn't have killed everything
5. Have your next platform ready before the current one dies

💡 **Pro Tip:** The best parasite platforms change every 3-6 months. Currently working in 2026: Reddit (DR 91), Medium (DR 95), LinkedIn Articles (DR 98), Substack (DR 88), and Facebook Groups (newer, less moderated). Always test with one article before going all-in.

10.4 Case Study #4: Reddit Marketing — $45.5K in 4 Weeks

Strategy: Reddit comment marketing + thread creation **Timeline:** 4 weeks **Investment:** $200 (residential proxies + tools) **Revenue generated:** $45,500 **Comments placed:** 10,000+ **Stick rate:** 85%

Reddit is the most underrated marketing channel in 2026. Google AI Overviews favor it. ChatGPT cites it constantly. And the barrier to entry is so low it's almost embarrassing.

$15/mo for residential). Each account got a unique proxy IP, unique email, and a natural-looking username. Spent the first week building karma — genuine comments in popular subreddits, sharing useful content, upvoting others. By day 7, each account had 100-300 karma.

Week 2: Research & Targeting. Used Trackings.ai to find Reddit threads already ranking on Google for buying keywords. Searched site:reddit.com "best [product]" for every product category I had affiliate relationships with. Found 500+ active threads ranking on Google's first page. Prioritized threads with high search volume keywords and recent activity.

Week 3: Comment Campaign. Deployed all 20 accounts across 500+ threads. Each comment was unique, genuinely helpful, and naturally mentioned the product with an affiliate link or branded recommendation. I wrote 50 comment templates and rotated them with slight variations so nothing looked copy-pasted. Key rule: provide genuine value FIRST, then mention the product. Comments that led with the recommendation got downvoted. Comments that told a story and mentioned the product naturally got upvoted.

Week 4: Scale & Optimize. Doubled down on threads and subreddits where comments were getting the most upvotes and clicks. Killed accounts that got shadowbanned (3 out of 20). Redeployed resources to winning subreddits. Tracked affiliate conversions by unique tracking links per account.

Final numbers:

- 10,000+ comments placed across 4 weeks
- 8,500 still live (85% stick rate)
- 1,500 removed by mods or shadowbanned
- Average upvotes per comment: 3.2
- Click-through rate on affiliate links: 2.8%

- Affiliate commissions (Amazon + direct): $27,300 (60%)
- Direct product sales (own products): $13,650 (30%)

- Lead generation (email signups → funnel): $4,550 (10%)
- **Total: $45,500**

Revenue per comment: $4.55. At scale, that number compounds because top comments continue generating traffic for months after posting.

What made this work:

- Real accounts with real karma (not fresh throwaway accounts)
- Genuine value in every comment (not spam)
- Targeted threads that were already ranking on Google (not random subreddits)
- Natural product mentions (not "Buy this product HERE!!!")
- Scale (10,000 comments means even a low conversion rate generates serious revenue)

10.5 Case Study #5: Local SEO Agency — $0 to $10K MRR in 90 Days

Timeline: 90 days **Starting investment:** $0 **Client acquisition cost:** $50/client **Month 3 MRR:** $10,000+

This case study is from an Advise.so community member who followed the exact blueprint from Module 5. I'm sharing it because it's more relatable than my own numbers — this person started from absolute zero.

17

Picked a niche: med spas. Why? High lifetime customer value ($5K+), desperate for local visibility, willing to pay for marketing, and there are thousands of them in every major city.

Used Outscraper to scrape 1,000 med spa leads in 5 target cities. Loaded them into Instantly (cold email tool, $30/mo).

Sent 500 emails per day using 3 sending domains. Open rate: 15%. Reply rate: 3%. That's 15 replies per day — plenty of pipeline.

Closed 4 clients in the first month at $500/mo each. Services offered: GMB optimization, citation building, review generation, monthly reporting.

Month 2: Delivery + Proof ($2K → $5K MRR)

Delivered results using LocalRank.so Pro ($247.50/mo). Ran 500+ citations for each client (one-click). Optimized their GMB profiles. Set up review automation using GBP AI Autopilot. Ran Direction Boost for the 2 clients who were in competitive markets.

Results for clients within 30 days: average ranking improvement of 8 positions on Google Maps. Two clients went from invisible (position 20+) to top 3 for their primary keyword. Got video testimonials from both.

Used those testimonials in cold emails. Close rate jumped from 3% to 5% of replies. Closed 6 more clients. Raised prices to $750/mo for new clients.

Month 3: Scale ($5K → $10K MRR)

Created case studies with before/after screenshots from LocalRank's rank tracker. Launched a referral program — existing clients get one month free for every referral that signs. Three referrals came in month 3 alone.

Hired a VA in the Philippines ($600/mo) to handle delivery — running citations, posting to GMB, sending review requests. Increased cold email volume to 1,000/day with 5 sending domains.

$10,750. Started offering LLM citations as a premium add-on at $500/mo per client.

Ongoing economics:

- Revenue: $10,750/mo
- LocalRank Pro: -$247.50/mo
- Instantly: -$77/mo
- VA: -$600/mo
- Domains/tools: -$50/mo
- **Net profit: $9,775.50/mo (91% margins)**

10.6 Case Study #6: Content Site — Amazon Affiliate $150K/Year

Site: Far & Away (travel niche) **Strategy:** AI content at scale + traditional SEO + AI SEO updates **Timeline:** 3 years running **Current revenue:** ~$150K/year

This is my longest-running case study and the one that taught me the most about surviving Google updates.

Over 3 years, we published 2,000+ articles. 80% were AI-generated using ChatGPT and Koala, 20% were human-written or heavily human-edited. The site grew to 45K visitors/month at its peak, generating $100-170/day from Amazon Associates and $60-140/day from Mediavine display ads.

Then March 2024 happened. The core update hit travel affiliate sites hard. We lost 60% of traffic overnight. Revenue dropped from $400+/day to $150/day.

The recovery playbook: we pivoted to AI SEO. Updated every money page with current-year data and "Last Updated" timestamps. Added FAQ schema to all top pages. Restructured

Within 6 months, we recovered 70% of the lost traffic — but the traffic source mix changed dramatically. Before the update: 95% Google organic, 5% other. After recovery: 60% Google organic,

25% AI search (ChatGPT, Perplexity, AI Overviews), 15% Reddit/social.

Current revenue: ~$150K/year at 90% profit margins. Less than the peak, but more diversified and more stable.

10.7 My Personal Revenue: The Full Picture

2024 Total: $3,435,402.94

Amazon Affiliate

Revenue: $844,734.07
Share of total: 24.6%

Indexsy (SEO Tool)

Revenue: $566,461.89
Share of total: 16.5%

Version.so (Hosting)

Revenue: $452,892.00
Share of total: 13.2%

OnlyFans (OF)

Revenue: $410,658.61
Share of total: 12.0%

Share of total: 10.7%

Mediavine (Display Ads)

Revenue: $318,256.14
Share of total: 9.3%

STR Lisbon (Airbnb)

Revenue: $144,820.21
Share of total: 4.2%

Levanta

Revenue: $141,253.12
Share of total: 4.1%

Binance (Crypto)

Revenue: $105,099.86
Share of total: 3.1%

Other

Revenue: $85,422.91
Share of total: 2.5%

Net margins: 43%. After-tax income: ~$1.5M.

Recent monthly highlights:

- November 2025: $374,354.88 (all-time high)
- December 2025: $279,680.81
- October 2025: $272,700

Revenue progression (monthly averages):

- 2014: $450/mo → 2017: $10K/mo → 2019: $45K/mo → 2022: $258K/mo → 2024: $293K/mo → 2025: $243K/mo (43% net margins)

The drop from 2024 to 2025 monthly average is because I divested from some lower-margin revenue streams and focused on SaaS (LocalRank, Trackings, Version.so). Lower top-line revenue, higher margins, more stability.

10.8 ROI Rankings: What Actually Made Money

Ranked by return on investment:
ChatGPT Ranking

Investment: $250
Revenue: $50,000 (90 days)
ROI: 20,000%
Timeline: 10 days

Local SEO Agency

Investment: $0
Revenue: $10K MRR
ROI: ∞
Timeline: 90 days

Parasite SEO

Investment: $250
Revenue: $8,300
ROI: 3,320%
Timeline: 8 days

Reddit Marketing

ROI: 22,750%
Timeline: 4 weeks

LocalRank.so

Investment: $20,000
Revenue: $600K ARR
ROI: 3,000%+
Timeline: 5 months

What didn't work (or wasn't worth it):

- Paid ads for affiliate content (broke even at best)
- YouTube content (great for brand, terrible time-to-revenue ratio)
- Newsletter sponsorships (low ROI, high effort)
- 1-on-1 consulting (not scalable, traded time for money)
- Info products alone (too commoditized without a tool/service behind them)

💡 **Pro Tip:** The highest ROI strategies all share one trait: they leverage existing platforms or content. PBNs leverage domain authority. Parasites leverage DR. Reddit leverages Google's trust in UGC. The lowest ROI strategies require you to build everything from scratch. Always ask: "What existing leverage can I borrow?"

10.9 The Realistic Path from $0 to $10K/Mo

Based on my experience and helping 500+ people through Advise.so:

Month 1: Learn & Build ($0-500/mo). Study this course. Set up your tools. Create your first 10 pieces of AI-optimized content. Start 5 Reddit accounts and begin the warm-up process. Choose your path: agency, affiliate, or SaaS. Time: 20-40

17

content. Try multiple strategies — parasite, Reddit, direct SEO. Track everything with Trackings.ai. Kill what doesn't work. Double down on what does. If agency path: send your first 1,000 cold emails. If affiliate path: publish on 3+ parasites. Time: 20-40 hours/week.

Month 3: Double Down ($2,000-5,000/mo). Focus on your winning strategy. Increase volume. Improve quality. Build systems and SOPs so you're not doing everything manually. If agency: close your first 5 clients. If affiliate: scale winning content. Time: 30+ hours/week.

Month 4-6: Scale ($5,000-10,000/mo). Hire help (VA at minimum). Automate delivery. Raise prices. Build authority through case studies and testimonials. Add multiple income streams. Time: 20-30 hours/week (you've delegated).

Realistic expectations:

- $1K/mo: 1-2 months (achievable for anyone who executes)
- $5K/mo: 3-4 months (requires consistency + systems)
- $10K/mo: 4-6 months (requires delegation + scaling)
- $20K/mo: 6-12 months (requires team + multiple streams)

📋 Action Items

1. Pick ONE case study that matches your situation and reverse-engineer the exact steps
2. Calculate the ROI of your current strategies — kill anything under 200% ROI
3. Start the $0 to $10K/mo timeline this week (Month 1, Day 1)
4. Set up revenue tracking using the template in the Bonus section
5. Join Advise.so for accountability and community support

- **ChatGPT traffic converts at 20x the rate of Google organic.** Optimizing for AI citations isn't optional — it's the highest-converting channel available.

- **The highest ROI strategies leverage existing platforms.** Don't build everything from scratch when you can borrow authority from Reddit, parasites, and PBN networks.
- **Speed beats perfection.** Every case study above started producing revenue within 10-30 days. None of them were "perfect" at launch.
- **Diversification is survival.** My $3.4M/year comes from 10+ revenue streams. No single source accounts for more than 25%.
- **$10K/mo in 90 days is realistic** if you execute consistently, use the right tools, and don't quit after week 2.
