SEO PROGRESS REPORT · JUNE 19 TO SEPTEMBER 23, 2026

Fixing the foundations of a 200-page plumbing site before chasing rankings

CLIENT

Summit Plumbing Pros, Mesa, Arizona. ROC 338366

INDUSTRY

Residential plumbing, drain cleaning, trenchless sewer repair, water heaters

ROLE

SEO Specialist, TAG Marketing. On the Arizona site from June 19, 2026

PLATFORM

WordPress, Elementor, Rank Math, Search Atlas, Google Search Console, GA4

SECTION 1

Executive summary

Summit Plumbing Pros runs a 200-page Arizona site covering ten East Valley cities. When I came onto it in June 2026 it had **no blog, two competing designs, 780 broken icons, wrong city names on live pages and service claims the business could not honour**. #07 #09 #12

This phase was remediation, not growth. The work was to make the site consistent, accurate and indexable so that ranking work has something solid to stand on. The figures below are what that produced by September 23. One result is worth reading first: **in the local map pack Summit already places 3rd in its own area for emergency plumbing, holding 13 of 39 top-3 pins**, and that channel is producing the bookings the website is not. #16

780

Broken icons repaired

across 116 pages, from 64 media records #09

142

Pages moved onto one design

off Elementor defaults, onto Summit brand #09

176/200

Pages indexed by Google

only 10 real pages still missing #10 #14

93/100

Technical health score

site score 929 to 931 #11

On search performance, be precise

Comparing two matching 30-day windows, **June 1 to 30 against August 24 to September 22**: clicks from Google rose from **28 to 38**, click-through rate from 0.2 to 0.3 percent, and average position improved slightly from 28.0 to 26.9. Impressions fell from 17,800 to 11,400. #05

That is a genuine improvement in a 30-day window, and it is not the same thing as proof that the work caused it. A new website launched on September 3, inside that window. Section 5 sets out exactly what this report can and cannot claim.

SECTION 2

What we found

Every item below was found on the live site and recorded in a dated work report.

CRITICAL	**780 icons were broken across 116 pages.** The image files were still on the server, but their Media Library records had been deleted, so the site drew empty boxes. This was also what made page spacing look uneven. #09
CRITICAL	**The site was running two different designs.** Drain Cleaning used the Summit brand colours and fonts. Almost every other page was still on Elementor's out-of-the-box defaults: a different blue, black text, and Roboto instead of Poppins and Montserrat. #09
CRITICAL	**Pages promised service the business does not offer.** Ten emergency city pages advertised after-hours, late-night, holiday and "2 AM" service plus flat-rate pricing, while the same pages showed Monday to Saturday, 8 to 5. One promised arrival "within the hour". #13
CRITICAL	**Every page told Google the wrong opening hours.** The page data said open seven days, 9 to 5, and the About page showed a third different set. None matched the Google Business Profile. #12

CRITICAL	**Seven pages named the wrong city.** Six pipe lining city pages carried the wrong location, for example the Mesa page read "Pipe lining in Chandler". The Fountain Hills emergency page said "Apache Junction". #12 #13
CRITICAL	**A pricing page was live carrying template placeholder text** and software subscription plans that had nothing to do with plumbing. #12
WARNING	**Only 4 of 176 indexed pages were properly configured in Rank Math.** Focus keywords were missing from SEO titles across the site. #10
WARNING	**Thirteen pages carried two H1 headings**, the theme's generic title bar plus the real page heading. #08
WARNING	**The About page carried hidden Utah business information**, an empty "(Lic. #)" with no number, and three pages used "guaranteed" wording that was not approved. #11
WARNING	**The site had no blog at all**, and the theme had no single-post layout, so featured images would not have displayed even if posts existed. #07
WARNING	**Some city pages were near copies of each other**, two measured at 70 percent identical, and authority outside the site scored 9 out of 100. #11

SECTION 3

The work

Grouped by workstream. Every item comes from a dated daily work report.

ACCURACY AND COMPLIANCE

- Rewrote the after-hours, late-night, holiday and "2 AM" claims out of **10 emergency city pages**, and removed flat-rate pricing and the "within the hour" promise. #13
- Corrected the opening hours in the page data **sitewide** to Monday to Saturday 8 to 5, matching the Google Business Profile. #12
- Fixed the wrong city name on **7 pages**. #12 #13
- Took the placeholder pricing page private. Nothing linked to it. #12
- Replaced pricing answers in FAQs with a free-estimate call to action. #08 #13
- Removed 3 competitor mentions and one low-authority link from draft content before it went live. #07

DESIGN CONSISTENCY

- Moved **142 pages** onto the Drain Cleaning design: Summit colours, Poppins and Montserrat, consistent spacing. Every page kept its own wording, links, permalink and SEO settings. #09
- Restored **64 media records**, which brought back **780 icons across 116 pages** without editing a single page. #09
- Rebuilt **7 outdated hero sections** to the standard layout with breadcrumbs, intro copy and buttons. #08 #09

ON-PAGE SEO

- Built a Rank Math tracker covering all **200 pages and posts** against Google's indexed list. #10
- Wrote new titles, focus keywords and meta descriptions for **29 indexed pages** where the main keyword was missing from the title, checked against the approved service and city list before applying. #10
- Removed the duplicate H1 from **13 pages**. #08
- Added a 5-question FAQ with FAQ schema to the sewer line repair page. #08
- Added 5 internal links into pages already sitting close to page one. #13

CONTENT AND INDEXING

- Built the blog from zero: **5 posts** with focus keyphrases, metadata, internal links, quick-answer openings, FAQ sections and branded banners. #07
- Built an Elementor single-post template, which was why featured images had never displayed. #07
- Audited indexing twice. By September 22, of 53 URLs Search Console listed as not indexed, **only 10 were real pages**. The rest were feeds, plugin files, site-search URLs, redirects and deliberate noindex. #14
- Cut the sewer line repair page from 230KB to 92KB of page data and requested re-indexing. #08

IN DETAIL

780 broken icons that looked like a design problem

SYMPTOM

Across the site, icons were missing and spacing looked uneven and amateurish. The obvious reading was that the pages had been built badly. #09

DIAGNOSIS

It was not a design fault. **The image files were still on the server**, but their records in the WordPress Media Library had been deleted. Every widget pointing at a deleted record drew an empty box, and the empty boxes were what distorted the spacing. #09

WHY IT MATTERED

Editing 116 pages by hand would have taken days and risked breaking layouts. The fault was not in the pages at all.

WHAT FOLLOWED

Restoring **64 media records** brought back all **780 icons at once**, with no page edited and no layout touched. #09

SECTION 4

Results

Search figures are Google's own. Site figures are from the September crawl.

Google search, two matching 30-day windows

METRIC	JUNE	SEPTEMBER	CHANGE	READ
Clicks	28	38	+36%	UP
Click-through rate	0.2%	0.3%	+0.1 pts	UP
Average position	28.0	26.9	up 1.1	SLIGHTLY BETTER
Impressions	17,800	11,400	−36%	MIXED

Google Search Console. June 1 to 30 against August 24 to September 22, 30 days each. #05

Why fewer impressions is not automatically a loss

Most of the drop came from pages that were ranking too deep to ever be clicked, and several of them **improved their position while shedding those impressions**. Queen Creek moved from position 48.8 to 26.1, San Tan Valley from 42.7 to 25.1, and the Mesa sewer line page from 39.8 to **18.4**, the largest single gain on the site. #05

Site health

the pool to push to page one #11

Local map pack, where Summit actually competes

Two 39-pin grids around the Mesa office, rescanned 2026-09-23. They say opposite things, and the difference decides where the next phase should spend its effort. #16

GRID	AVG	BEST PIN	CENTRE PIN	PINS IN TOP 3	READ
emergency plumbing services, 1 mi	**4.6**	2	3	**13 of 39**	● GENUINELY COMPETITIVE
plumber mesa az, 0.33 mi	12.7	5	**0, not ranking**	**0 of 39**	● NOT WORKING

Search Atlas local heatmaps, business 143839, both grids rescanned 2026-09-23. Pins in the top 3 is the number that matters. An average position means little if no pin reaches the top 3. #16

Summit places third in its own area for emergency plumbing

Across the whole 1-mile grid Summit ranks **3rd**, behind only Mr. Rooter Phoenix (average 1.6) and Iconic Plumbing (2.3). It holds **13 of 39 pins in the top 3** and has been stable at 4.6 across both September scans. #16

It also carries **520 reviews at 4.8**, more than any competitor in that grid. This lines up with the CRM: the Business Profile produced 13 leads and 7 of the 12 booked jobs in the September snapshot. **The map pack, not organic search, is where Summit currently earns.** #12

The Mesa grid is a different story

Its average improved from 20.1 in July to 12.7 now, but that is movement inside the zone nobody clicks. **Zero of 39 pins reach the top 3**, 38 of 39 sit between positions 8 and 20, and Summit does not rank at all on the centre pin. #16

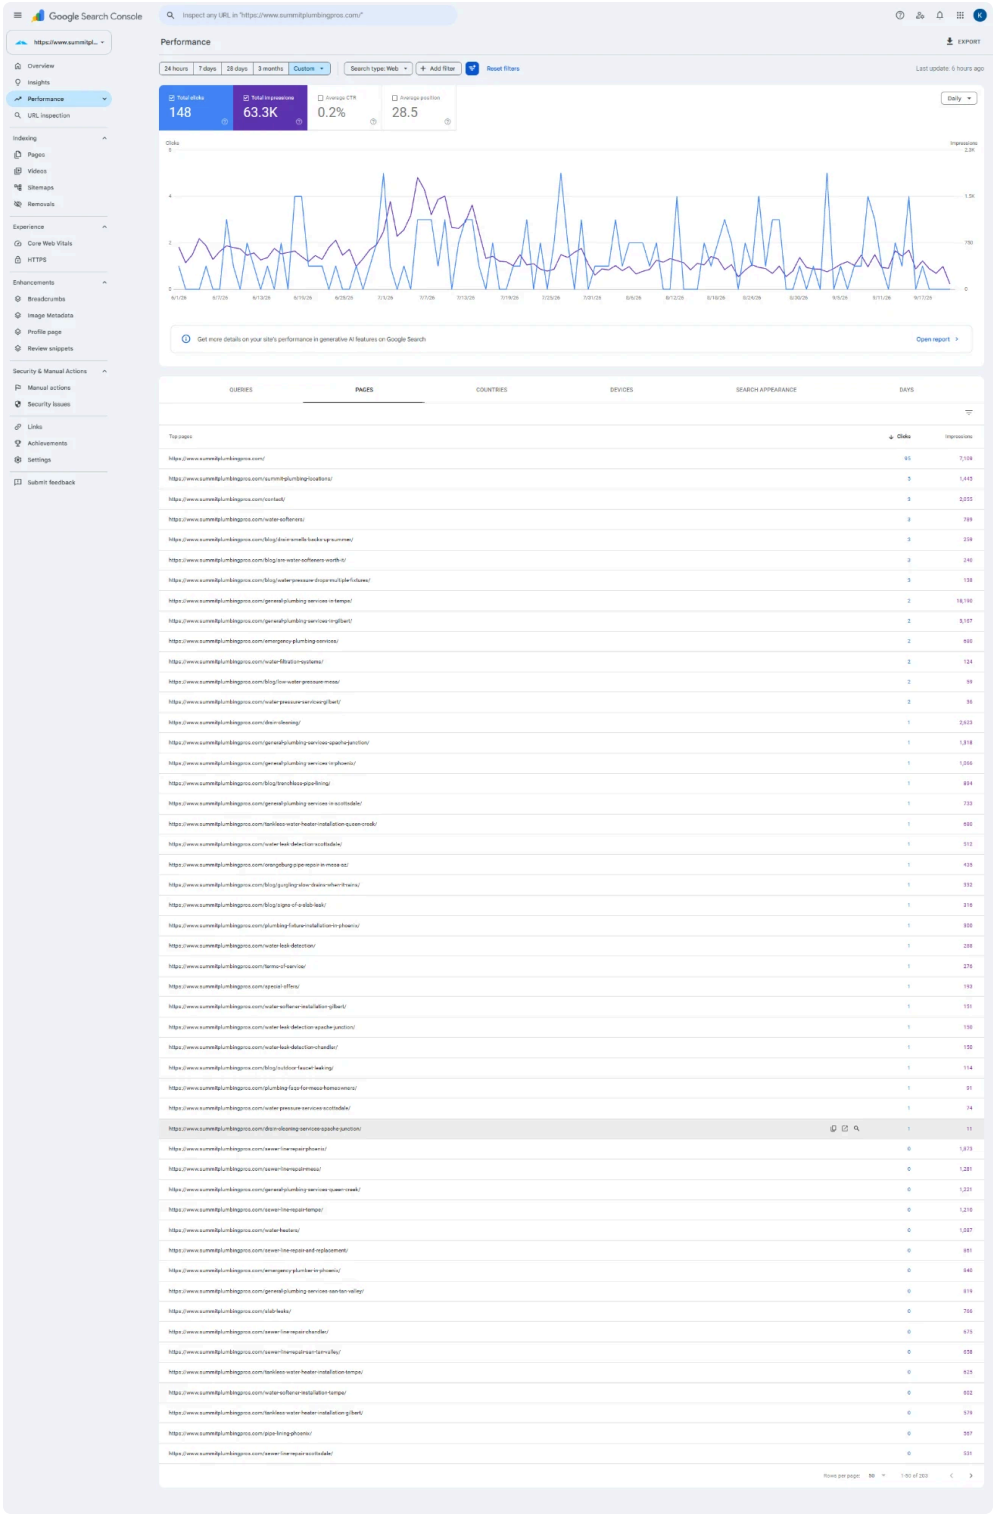

The grid is owned by Mesa Plumbing Co (average 1.0, top 3 on all 39 pins) and Hansen Family (2.1, all 39). Two of the top five are name matches: "Mesa Plumbing Co" and "Mesa Plumbing Pros". **An improving average here should not be reported as a win.**

Full window, June 1 to September 23

METRIC	VALUE	WHAT IT TELLS US
Impressions	63,300	Summit appears in search often enough.
Clicks	**148**	Almost none of it converts to a visit.

METRIC	VALUE	WHAT IT TELLS US
Average position	**28.5**	Page 3. That is the reason for the click rate.
Sessions, all sources	1,532	GA4, Arizona property.
Sessions from Google, free	503	33 percent of all visits.
Leads recorded	**25**	Needs verifying against the rotating phone pool.

The 115-day picture. Useful as a baseline for the next phase rather than as a result. #01 #04 #06

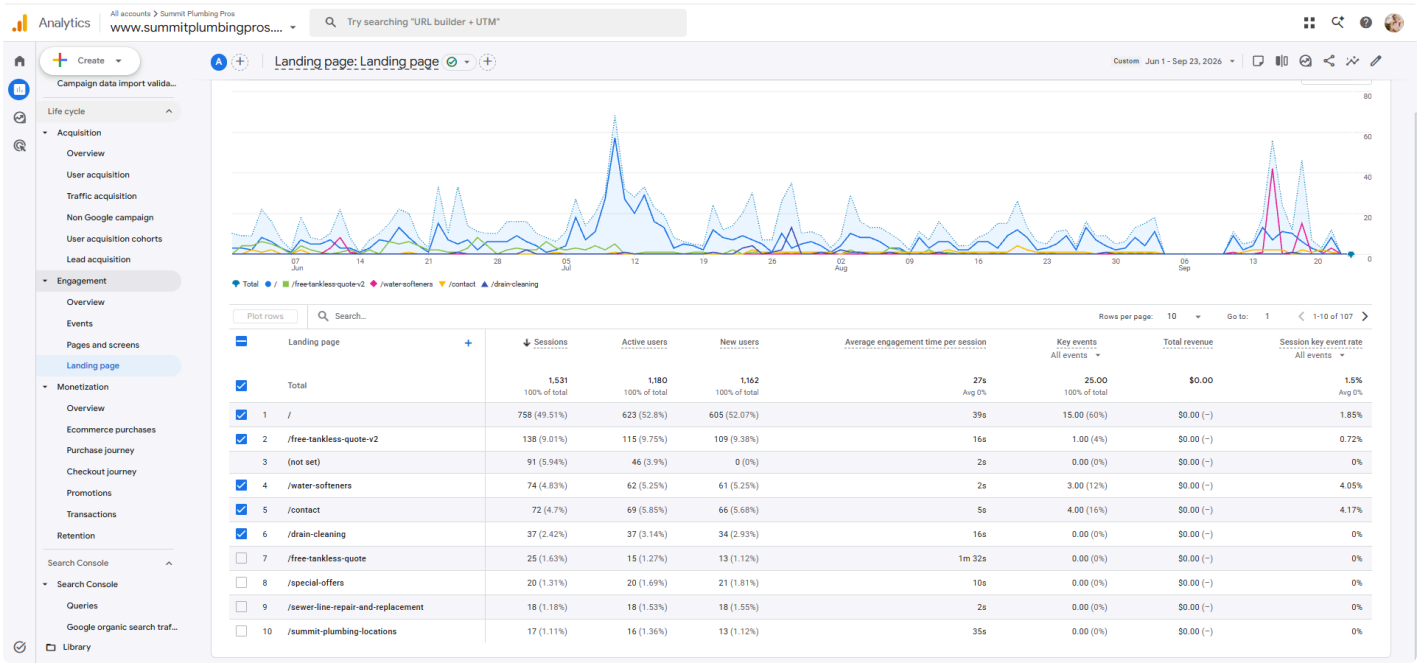

Evidence #01. Search Console, Performance, Jun 1 to Sep 23, 2026. The Pages tab below the chart shows the long tail of pages carrying four-figure impressions and no clicks.

Google Search Console > Performance > Search results

Leads and revenue are not measured here

This report covers search visibility, site health and the work completed. It does not claim leads, booked jobs or revenue. Analytics recorded 25 key events over the window, but Summit's phone numbers rotate through a tracking pool, so call tracking has to be verified before any of that is treated as a lead count. #04 #06

Evidence #04. GA4 Landing pages, Arizona property 459518259, Jun 1 to Sep 23. A week of September is missing from this view, see Section 5.

GA4 > Reports > Engagement > Landing page

SECTION 5

Candor: what the numbers do not say yet

Four limits, stated plainly, so nothing in this report can be read as more than it is.

A longer window reads differently

The 30-day comparison above shows clicks up 36 percent. Measured across the **full 90 days** since the work began, against the 90 days before it, clicks are **down**, 145 to 131, and page-one rankings fell from 83 to 61. #15

Both readings are real. June was a weak month, which flatters the 30-day comparison. Anyone reviewing this should know the longer view exists before they see it elsewhere.

A week of September traffic is missing

The relaunch was restored from a copy of Summit's Utah site, so the Analytics connection came with it. From the afternoon of **September 3 to September 10**, Arizona traffic was recorded in the Utah property. Reconnected September 12. #06

The traffic is not lost, it is filed in the wrong place. Every September visitor figure here is about a week short.

The relaunch sits inside the results window

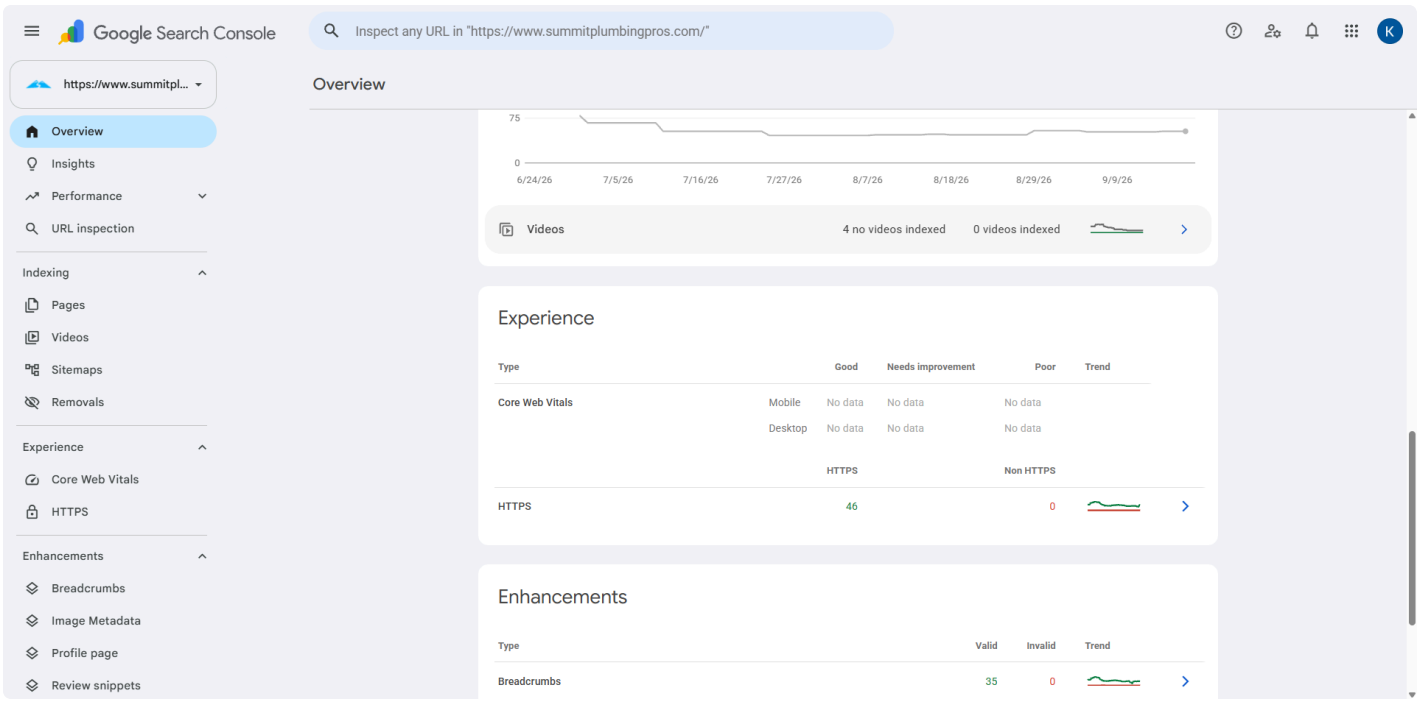

A new website went live on **September 3** and 86 new pages went live the day before. That is far too much change at once to attribute the search movement to any single cause, including this work.

September is a transition month. The first clean comparison is October.

The speed work cannot be proved

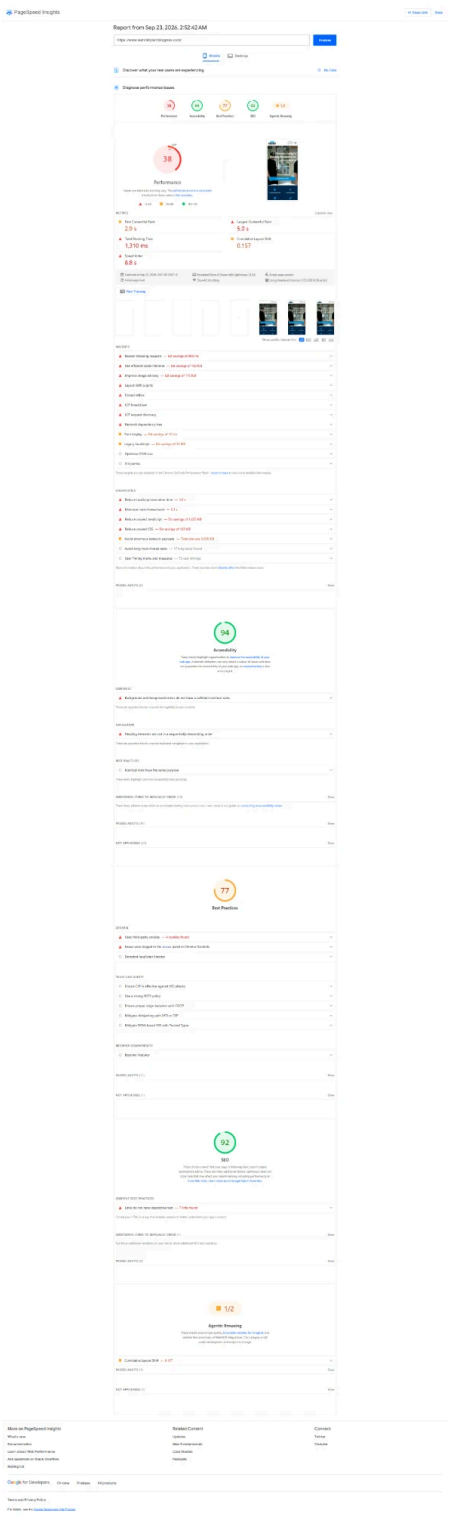

Images and scripts were optimised on September 16. No speed measurement was taken beforehand, and Google publishes **no real-visitor speed data** for this site because it does not yet get enough traffic. #02 #03

The work may well have helped. It cannot be shown. From the next change onward, a before reading is taken every time.

Evidence #02. Search Console, Experience. Core Web Vitals reads **No data** for mobile and desktop.

Google Search Console > Overview > Experience · 2026-09-23

Evidence #03. PageSpeed Insights, home page, mobile. The real-user panel at the top also reads **No Data**. Everything below it is lab.

pagespeed.web.dev · 2026-09-23

SECTION 6

Next phase

These are plans, not results, so they carry no evidence tags.

First

1. **Verify lead tracking** against the rotating phone pool and the CRM, so the next report can connect search to booked jobs.
2. **Push the 218 terms sitting between positions 4 and 20** onto page one. Two pages already rank between 9 and 14 and take no clicks at all, which points to something else taking the click rather than a ranking problem.
3. **Give "emergency plumber tempe" its own page.** It is the largest non-brand search the site appears for, 2,495 impressions and zero clicks, currently answered by a general services page.
4. **Back the emergency grid, not the Mesa grid.** Summit already holds 13 of 39 top-3 pins on emergency plumbing and none on "plumber mesa az". Effort spent on the grid that is already converting will return faster than effort spent fighting two name-matched competitors for a grid where no pin reaches the top 3.

Then

1. **Diagnose the home page position drop** and report to Scott. It is off limits for edits and it carries roughly two thirds of all clicks.
2. **Recover the missing week** of September analytics from the Utah property.
3. **Work down the 10 pages still not indexed.**
4. **Build presence off the site.** Authority scores 9 out of 100 and Summit appears in none of the 10 tracked AI-assistant answers unless the question names it.

APPENDIX

Evidence

Every tagged figure traces to one of these. The screenshots themselves sit inline in the sections that reference them.

#01	**Search Console, Performance.** Jun 1 to Sep 23, 2026. 148 clicks, 63.3K impressions, 0.2% CTR, position 28.5, 203 pages. Screenshot below.

#02	**Search Console, Experience.** Core Web Vitals reads "No data" for mobile and desktop. Screenshot below.
#03	**PageSpeed Insights.** Home page, mobile, Sep 23, 2026. Score 38. Real-user panel reads "No Data". Screenshot below.
#04	**GA4 Landing pages.** Jun 1 to Sep 23, 2026. 1,531 sessions, 27s average engagement, 25 key events. Screenshot below.
#05	**Search Console comparison.** Jun 1–30 against Aug 24–Sep 22, read directly from the Search Console interface, Sep 23.
#06	**GA4 Data API**, property 459518259, the Arizona property. Channel and daily figures read Sep 23.
#07	**Daily work report, Jun 19, 2026.** Indexing audit, blog built from zero, single-post template, competitor links removed.
#08	**Daily work report, Sep 9, 2026.** Sewer line page rebuild, 13 duplicate H1s, FAQ schema, 230KB to 92KB.
#09	**Daily work report, Sep 10, 2026.** 142 pages onto one design, 6 heroes rebuilt, 780 icons restored from 64 media records.
#10	**Daily work report, Sep 15, 2026.** Rank Math tracker for 200 pages, 176 indexed, 29 pages retitled.
#11	**Daily work report, Sep 16, 2026.** Crawl: 216 pages, 188 indexable, score 929 to 931, health 93/100, 218 terms at positions 4 to 20, authority 9/100.
#12	**Daily work report, Sep 17, 2026.** Hours corrected sitewide, pricing page made private, 6 pipe lining city names fixed.
#13	**Daily work report, Sep 21, 2026.** Claims removed from 10 emergency pages, Fountain Hills name fixed, 5 internal links added.
#14	**Daily work report, Sep 23, 2026.** Indexing check: 53 URLs flagged, only 10 real pages.

#16 **Search Atlas local heatmaps.** Business 143839, grids 32zj.dl3j and 32zj.dumu, 39 pins each, rescanned 2026-09-23. Pin distribution, competitor set and snapshot history read via the API.

#15 **Search Console, 90 days against 90 days.** Mar 21–Jun 18 against Jun 19–Sep 16, query table of 1,520 rows, read Sep 23.

Kimberly Bandola, SEO Specialist · TAG Marketing

Work performed June 19 to September 23, 2026 for Summit Plumbing Pros, Mesa, Arizona

Search figures: Google Search Console. Analytics: GA4 property 459518259. Captured Sep 23, 2026.
