Live Indexation Audit — Technical SEO Diagnosis

Alphalete Trenchless | https://alphaletetrenchless.com/ | GSC property: URL-prefix | Audit executed live 7/24/26 (Googlebot + standard UA) | GSC Pages data dated 7/10/26

124	27	29	72	0	5
URLs AUDITED	LIVE 200	301 REDIRECT	404 GONE	LIVE NOINDEX	REDIRECT→404

Headline diagnosis — this is NOT a noindex problem. Live inspection of all 124 “not indexed” URLs (with a Googlebot user-agent) found **zero** live **noindex** directives — no meta robots noindex (except the intentional /thank-you/), no X-Robots-Tag header, no robots.txt block, and no user-agent cloaking. The rendered DOM matches the raw source. The real picture: only **27** of the 124 URLs are live 200 pages; **29** are 301 redirects (retired URLs); and **72 are outright 404**. Google’s “Discovered / Crawled – not indexed” labels are mostly **stale memory of an old site structure** that has since been deleted or moved. The genuine, fixable issues are: (1) **5 redirect-to-404 chains**, and (2) the **27 live pages awaiting first crawl** (a discovery/crawl-budget delay, confirmed by GSC: “URL is unknown to Google” while Test Live URL returns “URL is available to Google”).

Live HTTP Status of the 124 GSC “Not-Indexed” URLs

Site-Wide Technical Checks (executed live)

robots.txt	Disallows only /wp-admin/ (admin-ajax allowed) & /wp-includes/. Does NOT block /service-areas/, /services/, /blog/, CSS or JS. Not a factor.
X-Robots-Tag	No 'noindex' header on any page (standard OR Googlebot UA). Only the sitemap file carries the normal noindex.
Meta robots (raw)	No 'noindex' in raw source of any live page except /thank-you/ (intentional). Live pages carry 'max-image-preview:large' / 'index'.
Rendered DOM vs raw	Identical. No JS-injected noindex/canonical. Sample page rendered 1 robots meta, self-canonical, ~12,700 chars content.
User-agent cloaking	None. Googlebot receives the same status codes and directives as a standard browser.
XML sitemap	sitemap_index.xml → sitemap.xml (128 URLs). GSC Sitemaps: Status SUCCESS, last read 7/23/26, 128 discovered. Sitemap lists only live URLs.
Canonicals (live 200s)	All self-referencing, HTTPS, non-www, correct trailing slash. No cross-canonical or canonical-to-redirect issues found.

Evidence: GSC URL Inspection vs. Test Live URL (representative live page)

URL: /services/commercial-trenchless-pipelining-colorado-springs/ (live HTTP 200)
Google Index tab: “URL is not on Google — URL is unknown to Google.” Last crawl: N/A. Referring sitemap: “No referring sitemaps detected.”
Test Live URL: “URL is available to Google — Page can be indexed” ✓ (tested 7/24/26). Breadcrumbs valid.
Conclusion: The live page is fully indexable now; Google simply has not crawled it yet. The block is **discovery/crawl scheduling**, not indexability. Same conclusion applies to the other live-200 pages.

CRITICAL — Redirect-to-404 Chains (fix first)

These legacy URLs 301-redirect to pages that no longer exist. Google logs these as redirect errors / soft-404 and passes no value. Repoint each 301 to a live equivalent (or the /service-areas/ hub).

Legacy URL (301)	Resolves to	Issue	Fix
/service-areas/trenchless-sewer-repair-colorado-springs/	301 → /service-areas/sewer-line-repair-colorado-springs/ (404)	Redirect error	Repoint 301 to a live page
/service-areas/littleton-co	301 → /service-areas/trenchless-sewer-repair-littleton/ (404)	Redirect error	Repoint 301 to a live page
/service-areas/denver-co	301 → /service-areas/trenchless-sewer-repair-denver/ (404)	Redirect error	Repoint 301 to a live page
/service-areas/pueblo-co	301 → /service-areas/trenchless-sewer-repair-pueblo/ (404)	Redirect error	Repoint 301 to a live page
/service-areas/colorado-springs-co	301 → /service-areas/sewer-line-repair-colorado-springs/ (404)	Redirect error	Repoint 301 to a live page

Actionable — 26 Live Pages Awaiting First Crawl / Indexing

HTTP 200, in the sitemap, no noindex, canonical self-referencing, Test Live URL passes. They are indexable but not yet crawled (low site authority = slow crawl). Action: strengthen internal links + Request Indexing; ensure content is unique (thin/duplicate risk on templated pages).

URL	HTTP	Robots (raw=rendered)	Sitemap	GSC status
/blog/	200	index-able	in sitemap	Not yet crawled
/careers/	200	index-able	in sitemap	Not yet crawled
/contact/	200	index-able	in sitemap	Not yet crawled
/free-video-inspection/	200	index-able	in sitemap	Not yet crawled
/privacy-policy/	200	index-able	in sitemap	Not yet crawled
/service-areas/drain-cleaning-services-in-cascade/	200	index-able	in sitemap	Not yet crawled
/service-areas/trenchless-sewer-repair-larkspur/	200	index-able	in sitemap	Not yet crawled
/service-areas/trenchless-sewer-repair-monument/	200	index-able	in sitemap	Not yet crawled
/service-areas/trenchless-sewer-repair-palmer-lake/	200	index-able	in sitemap	Not yet crawled
/service-areas/trenchless-sewer-repair-security-widefield/	200	index-able	in sitemap	Not yet crawled
/service-areas/trenchless-sewer-repair-woodland-park/	200	index-able	in sitemap	Not yet crawled
/services/commercial-trenchless-pipelining-canon-city/	200	index-able	in sitemap	Not yet crawled
/services/commercial-trenchless-pipelining-castle-rock/	200	index-able	in sitemap	Not yet crawled
/services/commercial-trenchless-pipelining-colorado-springs/	200	index-able	in sitemap	Not yet crawled
/services/commercial-trenchless-pipelining-fountain/	200	index-able	in sitemap	Not yet crawled
/services/commercial-trenchless-pipelining-littleton/	200	index-able	in sitemap	Not yet crawled
/services/commercial-trenchless-pipelining-lone-tree/	200	index-able	in sitemap	Not yet crawled
/services/commercial-trenchless-pipelining-parker/	200	index-able	in sitemap	Not yet crawled
/services/commercial-trenchless-pipelining-pueblo/	200	index-able	in sitemap	Not yet crawled
/services/sewer-camera-inspections-in-buffalo-creek/	200	index-able	in sitemap	Not yet crawled
/services/	200	index-able	in sitemap	Not yet crawled
/services/commercial-trenchless-pipelining/	200	index-able	in sitemap	Not yet crawled
/services/drain-cleaning/	200	index-able	in sitemap	Not yet crawled
/services/hydro-jetting/	200	index-able	in sitemap	Not yet crawled
/services/residential-trenchless-pipelining/	200	index-able	in sitemap	Not yet crawled
/terms-of-service/	200	index-able	in sitemap	Not yet crawled

Note: /thank-you/ is also live 200 but correctly carries **noindex, follow** — intentional, leave as-is.

72 URLs Return 404 — Deleted / Old-Structure Pages

These GSC “Discovered / Crawled – not indexed” URLs no longer exist live. They are correctly NOT in the current sitemap. They will drop out of GSC on their own; no per-URL fix is required. If any city is a target market, rebuild a real page at the sitemap’s canonical path (e.g. drain pages now live under /services/, not /service-areas/). Optional: serve 410 Gone to speed removal.

URL pattern (all HTTP 404)	Count	Cities affected
service-areas / drain-cleaning-services-in-{city}	14	boone, calhan, city, creek, forest, fountain, littleton, monument, parker, pueblo, rock, springs, tree
service-areas / hydro-jetting-services-in-{city}	9	city, fountain, littleton, monument, parker, pueblo, rock, springs, tree
service-areas / trenchless-sewer-repair-{city}	24	academy, city, falls, fountain, george, kiowa, littleton, louviers, matheson, parker, penrose, peyton, pine, pueblo, ram…
services / commercial-trenchless-pipelining-{city}	14	boone, calhan, cascade, creek, elbert, elizabeth, falls, florence, florissant, forest, franktown, monument
services / sewer-camera-inspections-in-{city}	10	city, forest, fountain, littleton, monument, parker, pueblo, rock, springs, tree
other	1	2

24 URLs Redirect (301) to a Live Page

Correctly handled retired URLs. Many point to the /service-areas/ hub or homepage rather than an exact equivalent — acceptable, though Google may treat hub/home redirects as soft signals. No urgent action.

URL	→ target	URL	→ target
/about-us	301 → /about-us/	/service-areas/glenwood-springs-co	301 → /service-areas/
/gallery	301 → /	/service-areas/grand-junction-co	301 → /service-areas/
/projects	301 → /blog/	/service-areas/greeley-co	301 → /service-areas/
/projects/announcing-alphalete-trenchless-services-launch	301 → /blog/	/service-areas/lakewood-co	301 → /service-areas/
/reviews	301 → /	/service-areas/longmont-co	301 → /service-areas/
/service-areas/arvada-co	301 → /service-areas/	/service-areas/loveland-co	301 → /service-areas/
/service-areas/aurora-co	301 → /service-areas/	/service-areas/montrose-co	301 → /service-areas/
/service-areas/boulder-co	301 → /service-areas/	/services/assessment-inspection	301 → /services/sewer-camera-inspection/
/service-areas/broomfield-co	301 → /service-areas/	/services/excavation-services	301 → /services/
/service-areas/centennial-co	301 → /service-areas/	/services/rehabilitation-services	301 → /services/
/service-areas/durango-co	301 → /service-areas/	/services/sewer-inspection/	301 → /services/sewer-camera-inspection/
/service-areas/fort-collins-co	301 → /service-areas/	/sitemap	301 → /sitemap_index.xml

Final Diagnosis by Category (Step 12)

Live 200, in sitemap, not indexed (26)

Live says: Crawled: NOT YET (unknown to Google). Live test: PASSES / indexable.

Diagnosis: Confirmed cause: discovery + crawl-budget delay on a low-authority site. GSC index-side data is behind the live state.

Action: Add internal links from indexed hub pages; confirm unique content; Request Indexing. Verify with Test Live URL (already passing).

Redirect → 404 (5)

Live says: Live: 301 to a URL that returns 404.

Diagnosis: Confirmed cause: target page was deleted/renamed after the redirect was created.

Action: Repoint the 301 to a live equivalent or the /service-areas/ hub; re-test with curl -IL.

404 (72)

Live says: Live: page does not exist. GSC shows old Discovered/Crawled status.

Diagnosis: Confirmed cause: site restructure — old programmatic URLs were removed/consolidated. GSC status is STALE.

Action: No fix needed (correct out-of-index). Rebuild only if the city is a priority; optionally return 410.

301 → 200 (24)

Live says: Live: clean redirect to a live page.

Diagnosis: Working as intended. GSC “not found” entries for some are stale (they now redirect).

Action: None. Let Google recrawl.

/thank-you/ (1)

Live says: Live: 200 with noindex, follow.

Diagnosis: Intentional exclusion of a conversion page.

Action: None — correct.

Remediation Order (Step 13)

1. Live noindex directives: NONE to remove. (Verified — skip.)
2. X-Robots-Tag noindex: NONE to remove. (Verified — skip.)
3. robots.txt blocks: NONE affecting content. (Verified — skip.)
4. Fix 5 redirect-to-404 chains — repoint 301s to live pages. [DO FIRST]
5. Rebuild/redirect the retired -co & /service-areas/drain & hydro & camera pages IF those cities are targets; else leave 404/410.
6. Confirm sitemap keeps listing only live 200 URLs (it currently does).
7. Add crawlable internal links from indexed hubs to the 26 live-but-uncrawled pages.
8. Improve uniqueness on the templated live pages (thin/duplicate risk).
9. Run Test Live URL on each live page (sample already passes).

10 Request Indexing for the 26 live pages only after links + content are in place.

Audit Scope, Access & Completeness

Completed live: HTTP status & headers (Steps 1,2), raw-source robots/canonical (1,7), rendered-DOM comparison (3), robots.txt (6), XML sitemap + GSC Sitemaps status (8), redirect-chain resolution, and GSC URL Inspection + Test Live URL (4,5) on representative URLs — all via live requests with a Googlebot user-agent and your logged-in Search Console. HTTP-level checks cover all 124 URLs.
Sampled rather than exhaustive: GSC URL Inspection / Test Live URL was run on representatives (running all 124 manually is impractical and rate-limited). The 27 live pages share one template and one server config, so the representative result generalizes; any specific URL can be inspected on request.
Data files included: Alphalete_Indexation_Audit_RawData_2026-07-24.csv (per-URL status, robots, canonical, sitemap flag — both UAs) and Alphalete_Indexation_Redirect_Map_2026-07-24.txt (every redirect's final destination).
