SEO & TECHNICAL AUDIT

Summit Plumbing Pros

www.summitplumbingpros.com

Prepared for: TAG Marketing **Date:** July 20, 2026 **Source:** Search Atlas / OTTO + Google Search Console

Executive Summary

#	Area	Verdict	Top Fix
1	Link Testing	NEEDS WORK	11 broken (4xx) links; **169 redirecting internal links** to repoint; 4 orphan pages
2	Responsiveness	HEALTHY	Layout is solid. Real issue = **mobile performance**: convert 181 images to WebP, enable compression
3	Indexability	HEALTHY	Sitemap verified healthy. Minor: 23 non-200 pages (overlap w/ broken links) & confirm 10 noindex headers
4	Organic / SEO	UNDERPERFORM	**Low authority (DP 10)** caps rankings at page 3. Build links + push the Tempe page

Top 3 highest-impact actions

1. Repoint the 169 redirecting internal links & fix the 11 broken links (crawl efficiency + link equity).
2. Push the Tempe page — #23 with 20K impressions is one optimization away from page 1.
3. Authority building — DP 10 is what keeps high-impression pages stuck on page 3.

1 Link Testing — NEEDS WORK

Full crawl of all **192 pages** (Search Atlas audit #120252, completed Jul 5).

Broken links & status codes

Response type	Count	Assessment
Missing (4xx – broken)	11 pages	Fix / redirect
Redirect (3xx)	13 pages	Review chains
Non-200 status (total)	23 pages	
Server errors (5xx)	0	Good

Internal link problems

Issue	Count	Why it matters
Internal links that redirect	169 (across 155 pages)	Wastes crawl budget, leaks PageRank — biggest link issue
Orphaned pages	4	No internal links point to them; hard to discover

Pages with too few internal links	12	Weak internal signals
Pages with only 1 dofollow link	2	Low perceived importance

Takeaway: No server errors (good), but cleanup is needed: **11 genuinely broken (4xx) links** to fix, and **169 redirecting internal links** to repoint to their final URLs (usually an http→https or trailing-slash mismatch on WordPress). Add internal links to the 4 orphan pages.

2 Mobile & Desktop Responsiveness

HEALTHY

Live homepage tested at desktop (1280px) and mobile (375px) viewports, plus performance factors from the crawl.

Layout / responsiveness — healthy

Check	Desktop (1280px)	Mobile (375px)
Viewport meta tag	Correct	Correct
Horizontal page overflow	None (1265 < 1280)	None (fits 375 exactly)
Content containment / reflow	Pass	Pass

Performance factors that hurt mobile (from crawl)

Issue	Pages affected
Large DOM size (>1,000 elements)	123
Images not in modern format (WebP/AVIF)	181
Images over 100 KB	19
JavaScript files over 300 KB	11
Inline style attributes (should be CSS)	181
Server compression not enabled	1 (site-wide)
Small mobile tap targets (<32px)	~10

Takeaway: Responsiveness is solid — nothing is broken on mobile or desktop. The real mobile problem is **page weight / performance**: heavy Elementor DOM, un-optimized (non-WebP) images, and large JS. Converting images to WebP and enabling compression are the highest-impact mobile fixes.

3 Indexability

HEALTHY

Crawl indexability (192 pages)

Status	Count
Indexable	159
Not indexable	33
Non-standard	0

What blocks the 33 non-indexable pages

Issue	Count	Impact
Pages returning non-200 status	23	Cannot be indexed (overlap w/ broken links, Sec. 1)
noindex via X-Robots-Tag HTTP header	10	Hard-blocked — verify intentional (usually archives)
noindex meta robots tag	1	Blocked from index

Sitemap: healthy — verified live in Google Search Console. sitemap_index.xml is submitted, status **Success**, last read Jul 18 2026, **170 pages discovered**. No action required.

Live Google signal: 283,975 impressions & 567 clicks confirm there is **no site-wide indexing block** — Google is indexing and serving pages. Average position 49 is a ranking issue, not an indexing one (see Section 4).

Takeaway: Indexability is in good shape — the sitemap is healthy and Google is serving the site. Remaining cleanup is minor: the **23 non-200 pages overlap with the broken links in Section 1** (fixing those fixes these), and the **10 X-Robots noindex headers** should be confirmed as intentional (usually author/tag/archive pages — fine to leave).

4 Organic Traffic & SEO Performance

UNDERPERFORM

Traffic snapshot — last 90 days (Google Search Console)

Metric	Value	Read
Clicks	122	Low
Impressions	57,540	Healthy visibility
CTR	3.0%	
Average position	26.9 (page 3)	Core problem

Lots of impressions but page-3 rankings = a ranking/authority problem, not a visibility problem.

Authority (Site Explorer)

Metric	Value	Read
Domain Power	10 / 100	Low — root cause of page-3 rankings
Backlinks	308	Thin
Ranking keywords	313	
Est. organic traffic	~368 / mo	

Top pages & the big opportunity

Page	Clicks	Impr.	Pos.	Note
/ (homepage)	65	3,418	19	Down 11 clicks, position slipped — mostly branded
/general-plumbing-services-in-tempe/	3	20,105	23	BIGGEST OPP — 20K impr., "plumbing companies near me" + 61 kw

/contact/	5	997	12	Branded
/drain-cleaning/	1	2,254	37	Money page ranking too low

Takeaway: The site has a **healthy impression base but weak authority (DP 10)** holding rankings on page 3. Highest-leverage moves: (1) **build authority** (links/citations); (2) **push near-miss pages** — the Tempe page (#23, 20K impressions) and drain-cleaning (#37); (3) **reverse the homepage decline**.
