Pipeliners USA — SEO Baseline

pipelinersusa.com | Baseline date: **July 22, 2026** | Source: Search Atlas (OTTO project ca42c443, site audit 41385, rank tracker 34164) | Prepared by TAG Marketing

Executive Summary

The site scores **78/100** in OTTO and has 2,268 optimizations already deployed. That on-page work is not converting into visibility: of the 20 tracked commercial keywords, **only one ranks anywhere in the top 100**. The gap is explained by the technical layer, not the copy — a broken sitemap, 64 redirecting pages, 176 internal links pointing at redirects, 24 pages returning 4xx, and failing Core Web Vitals. Fix the crawl path first; the remaining 2,465 OTTO items are refinement on top of that.

Metric	Value	Read
OTTO SEO score	**78** / 100	**Fair**
Issues found / deployed / pending	4,733 / 2,268 / **2,465**	**52% deployed**
Pages crawled	229 (140 in OTTO)	—
Status 2xx / 3xx / 4xx	141 / **64** / **24**	**Poor**
Indexable vs not indexable	130 vs **97**	**Poor**
Tracked keywords in top 100	**1 of 20**	**Critical**
Core Web Vitals	Failing (LCP + FCP)	**Poor**
Total technical issues	2,678	—

1. Ranking Position — the headline problem

Rank tracker project 34164 tracks 20 commercial keywords. Nineteen of them do not appear in the top 100 on desktop. The single ranking term sits at position 62.

Keyword	Position
sewer pipe lining cost	**62**
trenchless sewer repair	Not in top 100
trenchless sewer replacement	Not in top 100
trenchless pipe repair	Not in top 100
trenchless drain repair	Not in top 100
sewer pipe lining	Not in top 100
sewer pipe relining	Not in top 100
pipe lining near me	Not in top 100
sewer repair near me	Not in top 100

Keyword	Position
drain repair near me	Not in top 100
drain cleaning near me	Not in top 100
sewer camera inspection	Not in top 100
pipe bursting repair	Not in top 100
clogged sewer line repair	Not in top 100
sewer line replacement	Not in top 100
hydro jetting service	Not in top 100
no dig pipe repair	Not in top 100
pipe rehabilitation	Not in top 100
emergency sewer repair	Not in top 100
best sewer repair company	Not in top 100

2. Open OTTO Optimization Backlog (2,465 pending)

Item	Pending	Total	Deployed
Knowledge-Based Trust / factual enhancement	**420**	450	**7%**
Semantic analysis / knowledge graph	**371**	470	**21%**
Issues with links	**535**	658	**19%**
Schema markup	**257**	337	**24%**
Twitter Card	242	342	**29%**
Missing keywords	137	1,122	**88%**
Image alt texts	91	217	**58%**
Open Graph	89	185	**52%**
Headings length	83	171	**51%**
Meta descriptions	65	135	**52%**
Meta keywords	49	135	**64%**
Title tags	60	135	**56%**
Internal linking opportunities	56	156	**64%**
Dynamic indexing	10	132	**92%**
Heading optimizations	0	73	**Complete**
Canonical links	0	5	**Complete**
Topical maps & supplemental content	0	10	**Complete**

3. Open Technical Fixes

From site audit 41385 (229 pages crawled, 2,678 issues). Listed in the order they should be worked — each one gates the ones below it.

#	Issue	Evidence	Severity
1	**Search Atlas GSC reads blocked.** 403 “GSC is not enabled for the selected country” on sc-domain:pipelinersusa.com. Blocks all index-status and performance reporting until the country is activated in project GSC settings.	403 on every GSC call	**Blocker**
2	**Sitemap still wrong.** Non-indexable pages are included and real pages are missing. This is the unresolved root cause behind the standing not-indexed backlog.	15 non-indexable included; 5 pages missing	**Critical**
3	**Redirect drag.** Internal links pointing at redirects waste crawl budget and leak PageRank before it reaches the destination page.	176 redirecting internal links; 64 pages 3xx	**Critical**
4	**Pages returning 4xx.** Consistent with the earlier media migration that left old pages pointing at dead upload paths.	24 pages 4xx; 1 broken external link	**High**
5	**Duplicate city pages remain.** The de-dup pass is partially complete — Tempe is done, roughly five city pages still mirror each other.	6 non-unique titles, 6 non-unique H1s, 2 non-unique bodies	**High**
6	**Images unoptimized at the server layer.** Cause is LiteSpeed image optimization being switched off, not the source files. Note: JS Minify must stay OFF — it breaks the footer.	200 not WebP/AVIF; 118 over 100KB; 60 missing alt; 60 non-standard format	**High**
7	**Core Web Vitals failing** on both LCP and FCP, driven by DOM weight and JavaScript payload.	126 pages over 1,000 DOM nodes; 109 pages over 300KB JS	**High**
8	**Structural markup gaps.** Missing recommended schema types, plus heading hierarchy problems across the Elementor templates.	111 pages missing schema; 13 multi-H1; 46 skipped heading levels	**Medium**

4. Recommended Work Order

Items 1–5 are the ones likely to move the 19 unranked keywords. The OTTO queue is refinement layered on top of a site that currently cannot be crawled or indexed cleanly, so it should follow rather than lead.

Phase 1 — Restore visibility and crawl health

- Activate the country in Search Atlas GSC settings to restore index-status reporting.
- Rebuild the sitemap: drop the 15 non-indexable URLs, add the 5 missing pages.
- Repoint the 176 internal links that currently pass through redirects.
- Audit and resolve the 24 pages returning 4xx.

Phase 2 — Content uniqueness and speed

- Finish the remaining five duplicate city pages.
- Enable LiteSpeed image optimization and WebP delivery. Leave JS Minify off.
- Reduce DOM size and JavaScript payload on the heaviest Elementor templates.

Phase 3 — Work the OTTO queue

- Schema markup (257 pending) — deployed dynamically by OTTO, edit in the dashboard.
- Semantic analysis and Knowledge-Based Trust (791 combined) — the largest untouched block.
- Titles and meta descriptions (125 combined) — editable in Rank Math inside WordPress.
- Open Graph and Twitter Card (331 combined) — lowest priority, social display only.

5. Reference IDs

Asset	Identifier
OTTO project UUID	`ca42c443-7cfb-4051-91d3-509546438613`
OTTO numeric project id	9905
Site audit id	41385
Rank tracker project id	34164 (20 keywords)
GBP location id	7809 — Pipeliners, Mesa AZ
Citation campaign	id 5860 — Mesa, Arizona — status Finished
GSC property	`sc-domain:pipelinersusa.com`

Baseline captured 2026-07-22 from Search Atlas. Rankings and crawl data are point-in-time; re-run the site audit before comparing against a future measurement. Google Search Console figures are unavailable in this baseline because the Search Atlas GSC connection returned a 403 — see technical fix #1.
